## Acknowledgments

The “standards bearers” of the FAA-iCMM v2.0 project team brought this final mapping document together. However, it extends and builds on initial inputs provided by other members of the FAA-iCMM v2.0 author team.

We also include in this document mapping tables from the FAA-iCMM v1.0 in order to provide full traceability back to those seminal source models.

Mapping across diverse standards and reference documents is not an easy task and we would like to acknowledge and recognize those who contributed to the contents of this publication. FAA-iCMM version 1 and version 2 authors, with affiliations at time of contribution, are:

Bill Bradford, FAA  
David Cole, BAE Systems  
Rebecca Deloney, FAA  
Don Gantzer, TRW  
Bob Laws, FAA  
Heidi Leinneweber, FAA  
Pete Malpass, Software Engineering Institute  
John Marciniak, Software Engineering Institute  
Dave Piszczek, FAA  
Natalie Reed, FAA  
Ross Ridgeway, FAA  
Mike Rymond, FAA  
Adrienne Scott, TRW  
Sarah Sheard, Software Productivity Consortium

### **Section 7: References.....310**

## Section 1: Introduction

---

### **Purpose of this Document**

The purpose of this document is to provide traceability to sources that were used in the development of the process areas, base practices, additional practice guidance, capability levels, and generic practices of the FAA-integrated Capability Maturity Model (FAA-iCMM) (iCMM). This traceability is provided by means of mapping tables.

These tables demonstrate how the iCMM integrates its source models, and they illustrate how using one single model, the iCMM, can help an organization pursue process improvement effectively and efficiently by using a single integrated model that captures the guidance and principles of a multitude of current standards and reference models.

---

### **Basic Organization**

This document is organized into seven sections:

Section 1: Introduction  
Section 2: FAA-iCMM Version 2.0 Process Area Map  
Section 3: FAA-iCMM Version 2.0 Source Coverage Maps  
Section 4: FAA-iCMM Version 2.0 Practice-Level Maps  
Section 5: FAA-iCMM Version 1.0 Process Area Map  
Section 6: FAA-iCMM Version 1.0 Practice-Level Maps  
Section 7: References

---

### **Section 1: Introduction**

Section 1 introduces the document and explains the organization and content of each of its sections.

---

### **Section 2: FAA-iCMM Version 2.0 Process Area Map**

Section 2 provides a high-level mapping of iCMM v2.0 process areas to each of the eight major source models at the process level (called variously clauses/subclauses, focus areas, process areas, processes, or categories/ items depending on the source document). In some cases, some practices within these source processes are mapped to practices in other iCMM process areas, but only the *major* sources for iCMM process areas are identified in this table.

This high-level mapping table appears in Appendix D of the FAA-iCMM version 2.0, and is reproduced here to provide the framework for more detailed tables that follow in Section 4.

---

## Section 1: Introduction

---

**Section 2:  
FAA-iCMM  
Version 2.0  
Process Area Map  
(continued)**

Part 1 of this table maps the FAA-iCMM v2.0 process areas to:

- FAA-iCMM v1.0 process areas [FAA-iCMM 97] and [HFE],
- ISO 9001: 2000 [ISO 9001] clauses and/or subclauses
- EIA/IS 731 [EIA/IS 731] focus areas
- CMMI-SE/SW/IPPD/A [CMMI-SE/SW/IPPD] and [CMMI-SE/SW/A] process areas
- Malcolm Baldrige National Quality Award [MBNQA]/President's Quality Award [PQA] categories and/or items

Part 2 of this table maps the FAA-iCMM v2.0 process areas to:

- ISO/IEC TR 15504 [ISO/IEC TR 15504] processes
- IEEE/EIA (ISO/IEC) 12207 [IEEE/EIA 12207] processes
- ISO/IEC CD 15288 [ISO/IEC CD 15288] processes
- Other Sources, if applicable, including [IPD-CMM], [EIA-632], [SA-CMM 99], [PSM], [P-CMM], and others listed

---

**Section 3:  
FAA-iCMM  
Version 2.0 Source  
Coverage Maps**

Section 3 comprises eight tables, one for each of the major source standards or documents (indicated above) that is integrated into the iCMM version 2.0. These tables are at the practice level (called variously subclauses, specific practices, base practices, items, tasks, or activities depending on the source model). The first column of each of these tables identifies the practice-level component in the source document, and the second column indicates what practice(s) in the iCMM include, or cover, or pertain to that component. In some cases, mapping at the goal level is also included. Note that in several cases, iCMM generic practices as well as base practices cover source model components, and these are included in the mappings.

These tables are particularly useful for those using or familiar with any of the source documents. For example, an organization transitioning from iCMM v1.0 to iCMM v2.0 can easily identify where each iCMM v1.0 practice is covered in iCMM v2.0; an organization familiar with ISO 9001 can identify where and how that standard is covered in the iCMM; an organization using EIA/IS 731 or any of the CMMI models can understand how those practices are integrated into the iCMM; users of ISO/IEC TR 15504 or ISO/IEC 12207 have access to similar information.

Note that four of the source standards and documents are copyright protected by the International Organization for Standardization, and thus only the paragraph numbers and titles are provided in these cases. Interested readers should obtain copies of these documents for additional information on the details.

## Section 1: Introduction

---

---

### **Section 4: FAA-iCMM Version 2.0 Practice-Level Maps**

Section 4 provides practice-level mappings for each practice, in each process area of the iCMM v2.0. Each of these 23 process area mapping tables follows the same format as the table in section 2, i.e., part 1 of each table maps across the first 5 sources, and part 2 maps across the next 3 sources and also includes any other sources as applicable. Goal mappings are also included, as applicable.

There is also a table that maps iCMM v2.0 capability levels and generic practices to the 4 source models that contain this concept: iCMM v1.0, CMMI-SE/SW/IPPD, EIA/IS 731, and ISO/IEC TR 15504.

---

### **Section 5: FAA-iCMM Version 1.0 Process Area Map**

Both section 5 and section 6 elaborate on sources of iCMM v1.0. Since iCMM v1.0 is a major basis for iCMM v2.0, these sections continue iCMM v2.0 traceability back to the 3 original CMMs that were integrated into iCMM v1.0.

Section 5 provides high-level mappings of FAA-iCMM v1.0 [FAA-iCMM 97] process areas to their major sources, at the process level (called process areas or key process areas depending on the source model). In some cases, some practices within these source processes are mapped to practices in other iCMM process areas, but only the *major* sources for iCMM v1.0 process areas are identified in this table.

This high-level mapping table appears in Appendix D of the FAA-iCMM version 2.0, and is reproduced here to provide the framework for more detailed tables that follow in Section 6.

The source models for iCMM v1.0 are:

- Systems Engineering CMM [SE CMM]
  - Software Acquisition CMM [SA-CMM 97]
  - CMM for Software [SW-CMM 93]
- 

### **Section 6: FAA-iCMM Version 1.0 Practice-Level Maps**

Section 6 provides practice level mappings for each practice, in each process area of the iCMM v1.0. Each of these 23 process area mapping tables follows the same format as the table in section 5, mapping across the 3 source CMMs identified above. In addition, all practices and activities in each source model are included in the process area maps, with an indication of where source practices are covered if not integrated into the specific process area that is the focus of the table. For example, a source practice may be covered in another process area, or by a generic practice, and if this is the case this information is provided.

---

## Section 1: Introduction

## Section 2: FAA-iCMM Version 2.0 Process Area Map

**Table 1: FAA-iCMM v2.0 Process Areas and their Major Sources - Part 2**

<i>FAA-iCMM v2.0 Process Area</i>	<i>ISO/IEC TR 15504 Processes (with process type*)</i>	<i>IEEE/EIA (ISO/IEC) 12207 Software life cycle processes</i>	<i>ISO/IEC CD 15288 System Life Cycle Processes</i>	<i>Other Sources</i>
<b>PA 21 Process Improvement</b>	ORG.2 Improvement process (basic) ORG.2.1 Process establishment (component) ORG.2.2 Process assessment (component) ORG.2.3 Process improvement (component) 15504 Part 7: Guidelines for Process Improvement	7.3 Improvement	5.2.1 Enterprise Environment Management 5.2.3 System Life Cycle Processes Management	
<b>PA 22 Training</b>	ORG.3 Human resource management (extended)	7.4 Training	5.2.4 Resource Management	People CMM: Training Knowledge and Skills Analysis
<b>PA 23 Innovation</b>	ORG.4 Infrastructure (basic)	7.2 Infrastructure	-	
<b>Areas not covered in FAA-iCMM v2.0</b>	ORG.3 Human Resource management (extended) – practices regarding recruitment, staff evaluation, and staff records	None	Resource Management – activities regarding recruitment, retention, personnel pool, and staff review	N/a

\*ISO/IEC TR 15504 process types are:

*Basic* – processes identical in intent to processes in ISO/IEC 12207

*Extended* – processes that are expansions of ISO/IEC 12207 processes

*New* – processes that are outside the scope of ISO/IEC 12207

*Component* – processes (group of one or more ISO/IEC 12207's activities from same process)

*Extended Component* – processes that are one or more of ISO/IEC 12207's activities from same process, with additional material.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

### FAA-iCMM v1.0 to FAA-iCMM v2.0

FAA-iCMM v1.0 Process Areas, Goals, and Practices	FAA-iCMM v2.0 Process Areas, Goals, and Practices
<b>PA 01 Needs</b>	<b>PA 01 Needs; PA 02 Requirements</b>
1. Customer needs are represented in a statement of system requirements.	PA 02 1. Requirements are developed from customer and other stakeholder needs.
2. Changes to the system requirements are communicated to the customer for agreement.	PA 02 3. All requirements information is recorded in a baseline that is maintained and controlled throughout the life cycle.
BP 01.01 Elicit Needs	BP 01.02 Elicit Needs
BP 01.02 Analyze Needs	BP 01.03 Analyze Needs
BP 01.03 Develop System Requirements	BP 02.07 Record and baseline requirements
BP 01.04 Obtain Customer Agreement	BP 02.07 Record and baseline requirements
BP 01.05 Inform Customer	BP 01.05 Communicate with Customers
<b>PA 02 Requirements</b>	<b>PA 02 Requirements; PA 01 Needs; PA 03 Design</b>
1. Requirements are derived from customer needs and other appropriate sources	PA 02 1. Requirements are developed from customer and other stakeholder needs.
2. Requirements are allocated to support the synthesis of solutions.	PA 03 3. Allocations of requirements to the design elements are established and maintained.
3. Requirements are unambiguous, traceable, and verifiable.	PA 02 2. Requirements satisfy established quality criteria including unambiguity, completeness, traceability, feasibility, and verifiability.
4. Requirements are controlled to establish a baseline for engineering and management use.	PA 02 3. All requirements information is recorded in a baseline that is maintained and controlled throughout the life cycle.
5. Plans, products, and activities are kept consistent with requirements.	PA 02 4. Plans, products, activities, and agreements are checked for consistency with requirements, and any inconsistencies are identified for correction.
BP 02.01 Develop detailed operational concept	BP 01.03 Analyze Needs
BP 02.02 Identify key requirements	BP 02.03 Identify key requirements
BP 02.03 Derive and partition requirements	BP 02.04 Derive requirements
BP 02.04 Identify interface requirements	BP 02.05 Identify external interface requirements
BP 02.05 Allocate requirements	BP 02.01 Identify Functional and Performance Requirements BP 03.04 Allocate Requirements
BP 02.06 Analyze requirements	BP 02.06 Analyze requirements
BP 02.07 Capture and baseline requirements	BP 02.07 Record and baseline requirements
BP 02.08 Analyze and incorporate requirements changes	BP 02.08 Analyze and resolve requirements change requests
BP 02.09 Maintain consistency and traceability	BP 02.09 Maintain consistency and traceability
<b>PA 03 Architecture</b>	<b>PA 03 Design; PA 02 Requirements</b>
1. A system architecture that will meet the defined requirements is established and maintained.	1. A product or service design that will meet the defined requirements is established and maintained.
2. The architecture evolves to meet changing requirements.	1. A product or service design that will meet the defined requirements is established and maintained.
BP 03.01 Derive system architecture requirements	BP 02.04 Derive requirements
BP 03.02 Identify key design issues	BP 03.01 Identify and Prioritize Design Issues
BP 03.03 Develop architectural structure	BP 03.02 Develop Design Structure
BP 03.04 Develop architectural interface requirements	BP 03.03 Develop Interface Specifications
BP 03.05 Allocate architecture requirements	BP 03.04 Allocate Requirements

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>FAA-iCMM v1.0 Process Areas, Goals, and Practices</b>	<b>FAA-iCMM v2.0 Process Areas, Goals, and Practices</b>
BP 03.06 Capture system architecture	BP 03.08 Establish and Maintain Design Description
<b><i>PA 04 Alternatives</i></b>	<b><i>PA 04 Alternatives Analysis</i></b>
1. An evaluation strategy is established and maintained.	1. Strategies are established and maintained that support the analysis of alternatives and structured decision-making.
2. Alternatives are identified, analyzed and selected in accordance with the established strategy.	2. Alternative solutions to selected issues are analyzed and solutions selected or recommended in accordance with established strategy and criteria with the established strategy.
3. Results of the evaluation are recorded for each alternative.	3. Results and rationale of alternatives analysis are documented and communicated.
BP 04.01 Establish Evaluation Criteria	BP 04.01 Establish Analysis Strategy
BP 04.02 Define Analysis Approach	BP 04.03 Select Analysis Method
BP 04.03 Identify Alternatives	BP 04.04 Identify Alternative Solutions
BP 04.04 Analyze Alternatives	BP 04.05 Analyze Alternative Solutions
BP 04.05 Select Solution	BP 04.06 Select Solution
BP 04.06 Capture the Disposition of Each Alternative	BP 04.07 Communicate Analysis Results
<b><i>PA 05 Outsourcing</i></b>	<b><i>PA 05 Outsourcing</i></b>
1. Qualified suppliers are selected to provide product or process components.	2. Qualified suppliers are selected to provide solution or process components.
2. A productive communications environment is established and maintained with suppliers.	3. A productive communications environment is established and maintained with potential suppliers.
BP 05.01 Identify Needed System or Process Components	BP 05.01 Identify Needed Products or Services
BP 05.02 Identify Competent Suppliers	BP 05.02 Identify Competent Suppliers
BP 05.03 Prepare for the solicitation	BP 05.03 Prepare for the Solicitation or Tasking
BP 05.04 Choose Supplier	BP 05.04 Choose Supplier
BP 05.05 Communicate with Suppliers	BP 05.05 Communicate with Suppliers
<b><i>PA 06 Software Development and Maintenance</i></b>	<b><i>PA 06 Design Implementation; PA 02 Requirements; PA 03 Design; PA 08 Evaluation; PA 07 Integration</i></b>
1. The software engineering tasks are defined, integrated, and consistently performed to produce the software.	PA 06 1. Solution component(s) are developed.
2. Software work products are kept consistent with each other.	PA 06 2. Documentation to support solution component(s) is established and maintained.
BP 06.01 Integrate Methods and Tools	BP 06.01 Establish the Implementation Environment
BP 06.02 Analyze Allocated Requirements	BP 02.06 Analyze requirements BP 03.06 Establish Component Specifications
BP 06.03 Design Software	BP 03.05 Define Interactions among Design Elements BP 03.06 Establish Component Specifications BP 03.08 Establish and Maintain Design Description
BP 06.04 Implement Software	BP 06.02 Formulate product or service components BP 06.03 Develop Documentation
BP 06.05 Test Software	BP 08.04 Evaluate Incremental Work Products
BP 06.06 Perform Integration Testing	BP 08.05 Verify end-Products BP 07.05 Confirm Integrated Product or Service Operation
BP 06.07 Develop Documentation	BP 06.03 Develop Documentation
BP 06.08 Maintain Consistency across Software Work Products	BP 02.09 Maintain consistency and traceability BP 08.07 Analyze Evaluation Results BP 07.05 Confirm Integrated Product or Service

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

FAA-iCMM v1.0 Process Areas, Goals, and Practices	FAA-iCMM v2.0 Process Areas, Goals, and Practices
	Operation
<b>PA 07 Integration</b>	<b>PA 07 Integration; PA 03 Design; PA 08 Evaluation</b>
1. A strategy for integrating the system elements is defined.	PA 07 1. A strategy for integrating the product and service elements is defined.
2. Interfaces are defined in accordance with the system architecture.	PA 03 1. A product or service design that meets the product and service requirements is established and maintained.
3. System elements are verified.	PA 07 2. Readiness of product and service elements for integration is verified.
4. The system is integrated in accordance with the integration strategy.	PA 07 3. The product or service is integrated in accordance with the integration strategy.
BP 07.01 Define Interfaces	BP 03.03 Develop Interface Specifications
BP 07.02 Verify Receipt of System Elements	BP 07.02 Confirm Readiness of Product and Service Elements
BP 07.03 Verify System Element Correctness	BP 08.05 Verify end-Products
BP 07.04 Verify System Element Interfaces	BP 08.05 Verify end-Products
BP 07.05 Assemble Aggregates of System Elements	BP 07.04 Assemble Product and Service Elements
BP 07.06 Test System Level Integration	BP 07.05 Confirm Integrated Product or Service Operation
BP 07.07 Develop Integration Strategy	BP 07.01 Develop Integration Strategy
<b>PA 08 System Test and Evaluation</b>	<b>PA 08 Evaluation; PA 05 Outsourcing; PA 12 Supplier Agreement Management</b>
1. The evaluation approach, requirements and methods are defined to provide an objective basis to support the decision for acceptance of the system products and services.	PA 08 1. The evaluation approach, requirements, methods, and environment are established to provide an objective basis for determining whether the products and services meet requirements and can be accepted.
2. Evaluations are performed as planned.	PA 08 2. Evaluations are performed as planned
3. Analyses are conducted on results of evaluations and developer performance.	PA 08 3. Analyses are conducted on results of evaluations to support acceptance or corrective actions.
BP 08.01 Develop Evaluation Strategy and Requirements	BP 08.01 Develop Evaluation Strategy
BP 08.02 Define Evaluation Procedures	BP 08.02 Develop Evaluation Procedures
BP 08.03 Incorporate Evaluation Requirements into the Solicitation and Contract	BP 05.03 Prepare for the Solicitation or Tasking
BP 08.04 Monitor Developer Performance	BP 12.02 Review and Monitor Agreement Performance
BP 08.05 Perform Planned Evaluations	BP 08.03 Establish and Maintain Evaluation Environment BP 08.04 Evaluate incremental work products BP 08.05 Verify end-Products BP 08.06 Validate end-products
BP 08.06 Analyze Evaluation Results	BP 08.07 Analyze Evaluation Results
<b>PA 09 Transition</b>	<b>PA 09 Deployment, Transition, and Disposal</b>
1. The system support organization demonstrates its capacity to provide the required support upon assumption of responsibility for the system.	3. Customer/ stakeholder operation and support organizations demonstrate their capacity to support the product or service upon assumption of responsibility.
2. Continuity of configuration and requirements management is maintained during the transition.	3. Customer/ stakeholder operation and support organizations demonstrate their capacity to support the product or service upon assumption of responsibility.
BP 09.01 Conduct inventory	BP 09.03 Oversee Configuration of Product or Service

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>FAA-iCMM v1.0 Process Areas, Goals, and Practices</b>	<b>FAA-iCMM v2.0 Process Areas, Goals, and Practices</b>
BP 09.02 Develop and follow transition to support strategy	BP 09.01 Develop, Deploy, and Maintain a Strategy for Deployment, Transition and Disposal Activities BP 09.05 Transition Product or Service
BP 09.03 Demonstrate support capability	BP 09.04 Demonstrate Support Capability
BP 09.04 Oversee the configuration management of the system	BP 09.03 Oversee Configuration of Product or Service
BP 09.05 Oversee the requirements management of the system	BP 09.03 Oversee Configuration of Product or Service
BP 09.06 Transfer and tailor developer's processes to the support organization	BP 09.05 Transition Product or Service
<b><i>PA 10 Product Evolution</i></b>	<b><i>PA 23 Innovation; PA 00 Integrated Enterprise Management</i></b>
1. Strategies that support disciplined product evolution are established and maintained.	BP 00.02 Align to achieve the vision
BP 10.01 Define product evolution	BP 00.01 Establish and maintain strategic vision.
BP 10.02 Identify new product technologies	BP 23.01 Maintain New Technology Awareness BP 23.02 Select new technologies
BP 10.03 Adapt development processes	BP 23.04 Infuse New Technologies
BP 10.04 Ensure critical component availability	BP 23.03 Prepare for Infusion
BP 10.05 Insert Product Technology	BP 23.04 Infuse New Technologies
<b><i>PA 11 Project Management</i></b>	<b><i>PA 11 Project Management</i></b>
1. Plans for managing the project are established early in the project lifecycle and maintained.	1. Project plans are established, maintained and executed to provide required products and services that reflect customer and stakeholder needs.
2. Estimates of the project's planning parameters are established and maintained.	2. Estimates of the project's planning parameters are established and maintained to support resource estimates.
3. Commitments related to the project are established and maintained.	3. Commitments related to the project are established and maintained.
4. Progress of the project is evaluated against the project's established plans.	4. Progress of the project is evaluated against its plans.
5. Corrective actions are taken appropriately and managed to closure.	5. Corrective actions are taken when appropriate and managed to closure
BP 11.01 Identify the Activities	BP 11.02 Define the Activities and Life Cycle Approach
BP 11.02 Identify the Life Cycle Approach	BP 11.02 Define the Activities and Life Cycle Approach
BP 11.03 Establish Estimates	BP 11.04 Estimate Project Resource Requirements
BP 11.04 Establish Schedules	BP 11.05 Establish Schedules
BP 11.05 Establish and Maintain Plans	BP 11.06 Establish and Maintain Plans
BP 11.06 Establish Commitment	BP 11.07 Establish Commitment
BP 11.07 Monitor the Project according to Established Plans	BP 11.10 Monitor Project Performance
BP 11.08 Track Technical Process	BP 11.10 Monitor Project Performance
BP 11.09 Review Performance Against Established Plans	BP 11.11 Review and Analyze Project Performance
BP 11.10 Take Corrective Action	BP 11.12 Take Corrective Action
<b><i>PA 12 Contract Management</i></b>	<b><i>PA 12 Supplier Agreement Management</i></b>
1. The contract is kept consistent with the requirements of the acquisition project and relevant laws, policies, regulations, and guidance.	1. The documented agreement is kept consistent with the acquirer's requirements and relevant laws, policies, regulations, and other applicable guidance.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>FAA-iCMM v1.0 Process Areas, Goals, and Practices</b>	<b>FAA-iCMM v2.0 Process Areas, Goals, and Practices</b>
2. Contractor performance, products, and services are reviewed throughout the project to identify risks, problems, and appropriate corrective actions.	2. Supplier performance, processes, products and services are reviewed and monitored to identify problems and to ensure that products and services conform to requirements.
3. Measurements are used to track the contractor's performance.	3. Measurements are used to track the supplier's performance.
4. Communications between the acquirer's project team and the contractor are established and maintained.	4. Communications between the acquirer and the supplier are established and maintained to foster a cooperative and productive agreement environment.
BP 12.01 Review and Use Planning documents	BP 12.01 Use Planning documents:
BP 12.02 Conduct Periodic Reviews	BP 12.02 Review and Monitor Agreement Performance
BP 12.03 Maintain Contract Integrity	BP 12.03 Maintain Supplier Agreement Integrity
BP 12.04 Monitor Contractor's Support Processes	BP 12.04 Monitor Supplier's Plans, Processes, Activities and Products
BP 12.05 Foster Cooperative Environment	BP 12.05 Foster Cooperative and Collaborative Environment.
<b><i>PA 13 Risk Management</i></b>	<b><i>PA 13 Risk Management; PA 11 Project Management</i></b>
1. Risk Management is an integral part of project management and engineering activities.	PA 13 1. A risk management strategy is established and used that includes the plans, methods and parameters for management of risk.
2. Risks are identified and assessed for their likelihood and impact.	PA 13 2. Risks are identified and assessed for their likelihood and consequence.
3. Risk mitigation is performed when analysis indicates action.	PA 13 3. Risk mitigation is performed when analysis indicates action.
BP 13.01 Develop Risk Management Approach	BP 13.01 Develop Risk Management Approach
BP 13.02 Identify Risks	BP 13.02 Identify Risks
BP 13.03 Assess Risks	BP 13.03 Assess Risks
BP 13.04 Review and Validate Risk Assessment	BP 11.11 Review and Analyze Project Performance GP 2.13 Review Performance with Higher-level Management
BP 13.05 Execute Risk Mitigation Plans	BP 13.05 Implement and Monitor Risk Mitigation Plans
<b><i>PA 14 Coordination</i></b>	<b><i>PA 14 Integrated Teaming</i></b>
1. The project goals, processes and interfaces between the disciplines necessary to the system life cycle are coordinated.	1. Integrated teams composed of appropriate disciplines and stakeholders are established and maintained
2. Methods are established and maintained for interdisciplinary communication, coordination, and conflict resolution.	2. Team processes and methods are established and maintained for effective coordination, collaboration, communication, conflict resolution and decision-making
BP 14.01 Involve Disciplines	BP 14.02 Establish and Maintain Integrated Teams
BP 14.02 Promote Cross-Discipline Understanding	BP 14.03 Establish and Maintain a Collaborative Workplace
BP 14.03 Establish Coordination Methods	BP 14.04 Establish Coordination and Communication Methods
BP 14.04 Establish Resolution Methods	BP 14.05 Establish Resolution Methods
BP 14.05 Communicate Interdisciplinary Activity Results	BP 14.06 Communicate Integrated Team Activity Results
BP 14.06 Develop and Communicate Project Goals	BP 14.01 Develop and Communicate Team Goals

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>FAA-iCMM v1.0 Process Areas, Goals, and Practices</b>	<b>FAA-iCMM v2.0 Process Areas, Goals, and Practices</b>
<b><i>PA 15 Quality Assurance and Management</i></b>	<b><i>PA 15 Quality Assurance and Management</i></b>
1. Adherence of work products and activities to the applicable standards, procedures, and requirements is verified objectively.	1. Adherence of work products, services, and activities to applicable standards, procedures, and requirements is verified objectively.
2. Noncompliance issues that cannot be resolved within the software project are addressed by senior management.	2. Noncompliance issues are tracked and those that cannot be resolved at the project level are addressed by senior management.
3. Affected groups and individuals are informed of quality assurance activities, results, and quality improvement opportunities.	3. Affected groups and individuals are informed of quality assurance activities, and results. 5. Quality improvement opportunities are initiated with the appropriate stakeholders.
BP 15.01 Monitor Process Compliance	BP 15.02 Monitor Process Compliance
BP 15.02 Evaluate Product and Process	BP 15.02 Monitor Process Compliance BP 15.03 Monitor Product and Service Quality
BP 15.03 Detect Need for Corrective Actions	BP 15.05 Analyze Quality
BP 15.04 Record and Report Results	BP 15.04 Record and Report Results
BP 15.05 Analyze Quality	BP 15.05 Analyze Quality
BP 15.06 Initiate Quality Improvement Opportunities	BP 15.06 Initiate Quality Improvement
<b><i>PA 16 Configuration Management</i></b>	<b><i>PA 16 Configuration Management</i></b>
1. Configuration items that constitute baselines are identified.	1. Configuration items that are to be managed are identified.
2. Configuration items are controlled to support the disciplined evolution of the product baseline.	2. Configuration items are controlled and managed throughout the life cycle.
3. Configuration status is communicated to affected groups.	3. Status of configuration items is recorded and reported to all stakeholders.
4. Configuration baselines are audited to verify the product baseline integrity.	4. The integrity of baselines and work products is assured.
BP 16.01 Establish configuration management methodology	BP 16.01 Establish a Configuration Management Strategy
BP 16.02 Identify configuration units/items	BP 16.02 Identify and Baseline Configuration Items and Interim Work Products
BP 16.03 Establish and Maintain a repository for work product baselines	BP 16.03 Establish and Maintain a Repository for Work Product Baselines
BP 16.04 Control and track changes	BP 16.04 Control Changes
BP 16.05 Communicate configuration status	BP 16.05 Record and Report Configuration Status
BP 16.06 Conduct configuration audits	BP 16.06 Conduct Configuration Audits and Inspections
<b><i>PA 17 Peer Review</i></b>	<b><i>PA 08 Evaluation</i></b>
1. Defects in work products are identified and removed.	PA 08 2. Evaluations are performed as planned. PA 08 3. Analyses are conducted on results of evaluations to support acceptance or corrective actions
BP 17.01 Conduct peer reviews.	BP 08.04 Evaluate incremental work products
BP 17.02 Record and analyze peer review data.	BP 08.04 Evaluate incremental work products
<b><i>PA 18 Measurement</i></b>	<b><i>PA 18 Measurement and Analysis; PA 00 Integrated Enterprise Management; PA 11 Project Management</i></b>
1. Measurements are established, maintained and used based on the project and organization goals.	PA 18 1. Measures related to goals, objectives and major issues are established
2. Measurements are collected, analyzed and reported.	PA 18 2. Measurement data are collected, analyzed, and results are reported
BP 18.01 Establish Measures Based on Quantitative Goals	BP 18.01 Establish measures based on goals

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>FAA-iCMM v1.0 Process Areas, Goals, and Practices</b>	<b>FAA-iCMM v2.0 Process Areas, Goals, and Practices</b>
BP 18.02 Collect and Analyze Measurement Data	BP 18.02 Collect relevant measurement data BP 18.04 Analyze measurement data
BP 18.03 Communicate Quantitative Status	BP 18.05 Communicate results
BP 18.04 Take Corrective Action	BP 00.06 Act on results of review BP 11.12 Take Corrective Action
<b><i>PA 19 Prevention</i></b>	<b><i>PA 15 Quality Assurance and Management</i></b>
1. Common causes of defects are sought out and identified.	PA 15 4. Causes of defects are sought out, identified, prioritized, corrected, and methods of elimination are evaluated.
2. Common causes of defects are prioritized and systematically eliminated.	PA 15 4. Causes of defects are sought out, identified, prioritized, corrected, and methods of elimination are evaluated.
BP 19.01 Conduct causal analysis meetings	BP 15.05 Analyze Quality
BP 19.02 Coordinate action proposals	BP 15.06 Initiate Quality Improvement
BP 19.03 Document and track prevention data	BP 15.07 Evaluate the Effect of Changes
BP 19.04 Revise processes for defect prevention	BP 15.06 Initiate Quality Improvement
<b><i>PA 20 Organization Process Definition</i></b>	<b><i>PA 20 Process Definition; PA 21 Process Improvement</i></b>
1. The organization's set of standard processes is established and maintained.	PA 20 1. The set of standard processes is established and maintained.
2. Guides for tailoring the organization's standard processes are established and maintained.	PA 20 2. Guides for tailoring the standard processes are established and maintained.
3. Goals, performance data, and other assets for the organization's processes are collected, maintained, and communicated.	PA 20 3. Goals, performance data, and other assets that support the processes are collected, maintained, and communicated.
4. Process definition and improvement activities are coordinated across the organization.	PA 21 2. Process improvement activities are coordinated across projects and the organization.
BP 20.01 Appraise processes	BP 21.03 Appraise process
BP 20.02 Identify process goals	BP 21.01 Identify Process Improvement Goals

8.5.3 Preventive action	BP 10.04 Perform preventive maintenance BP 13.01 Develop Risk Management Approach BP 13.02 Identify Risks BP 13.03 Assess Risks BP 13.04 Develop Risk Mitigation Plans BP 13.05 Implement and Monitor Risk Mitigation Plans BP 15.05 Analyze Quality BP 15.06 Initiate Quality Improvement BP 15.07 Evaluate the Effect of Changes

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

### EIA/IS 731 to FAA-iCMM v2.0

EIA/IS 731 Focus Areas and Practices	FAA-iCMM v2.0 Process Areas and Practices
<b><i>FA 1.1 Define Stakeholder and System Level Requirements</i></b>	<b><i>PA 01 Needs; PA 02 Requirements; PA 08 Evaluation</i></b>
SP 1.1-1-1 Identify, collect and baseline stakeholder needs, expectations and constraints.	BP 01.02 Elicit Needs.
SP 1.1-1-2a Elicit or stimulate stakeholder needs	BP 01.02 Elicit Needs.
SP 1.1-1-2b Prioritize stakeholder needs, expectations and constraints.	BP 01.04 Establish and Maintain a Statement of Need.
SP 1.1-1-3a Review, coordinate, and deconflict stakeholder needs and constraints.	BP 01.04 Establish and Maintain a Statement of Need.
SP 1.1-1-3b Inform stakeholders on a regular basis about the status and disposition of needs, expectations, or measures of effectiveness	BP 01.05 Communicate with Customers.
SP 1.1-2-1a Analyze and quantify functionality required by users.	BP 02.01 Identify Functional and Performance Requirements.
SP 1.1-2-1b Transform customer/user requirements into a set of system level requirements.	BP 02.07 Record and baseline requirements.
SP 1.1-2-1c Define a system requirements baseline.	BP 02.07 Record and baseline requirements.
SP 1.1-2-1d Obtain an agreement between acquirer and developer that system level requirements reflect their needs and expectation	BP 02.07 Record and baseline requirements.
SP 1.1-2-2a Develop operational concepts and scenarios, which include functionality, performance, maintenance, support and disposal as appropriate.	BP 01.03 Analyze Needs.
SP 1.1-2-2b Review adequacy of system requirements to meet stakeholder needs with key stakeholders.	BP 02.07 Record and baseline requirements.
SP 1.1-2-2c Review operational concepts and scenarios to refine and discover requirements	BP 01.03 Analyze Needs.
SP 1.1-2-2d Record system requirement decisions that have a significant effect on cost, technical or schedule performance, and the rationale for the decisions.	BP 02.03 Identify key requirements
SP 1.1-2-2e Define the environment the system will operate in, including boundaries and constraints.	BP 01.03 Analyze Needs
SP 1.1-2-3a Negotiate an agreement between stakeholders and developers that system level requirements represent an optimum balance of their needs and expectations.	BP 02.07 Record and baseline requirements.
SP 1.1-2-3b Allow for expansion and growth in system requirements.	BP 02.06 Analyze requirements.
SP 1.1-2-3c Analyze and quantify functionality indicated by stakeholder requirements.	BP 02.01 Identify Functional and Performance Requirements.
SP 1.1-2-4 Perform analyses, simulations or prototypes to assure that system requirements will satisfy stakeholder needs and expectations.	BP 02.06 Analyze requirements BP 02.07 Record and baseline requirements BP 08.04 Evaluate incremental work products.
<b><i>FA 1.2 Define Technical Problem</i></b>	<b><i>PA 02 Requirements; PA 01 Needs; PA 03 Design; PA 04 Alternatives Analysis; PA 13 Risk Management</i></b>
SP 1.2-1-1a Develop a detailed operational concept of the interaction of the system, the user, and the environment, that satisfies the operational, support, maintenance, and disposal needs.	BP 01.03 Analyze Needs.
SP 1.2-1-1b Derive, from the system and other (e.g., environmental) requirements, requirements that may be logically inferred and implied as essential to system effectiveness.	BP 02.04 Derive requirements.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 1.2-1-1c Identify key stakeholder requirements and constraints that have a strong influence on cost, schedule, functionality, risk, or performance.	BP 02.03 Identify key requirements.
SP 1.2-1-2a Identify and manage non-technical requirements concurrently with operational, functional, support, maintenance and disposal requirements.	BP 02.02 Identify Nonfunctional Requirements and Constraints.
SP 1.2-1-2b Balance system and development cost and complexity, schedule, performance, and capabilities of existing designs and products in all trade studies using established criteria.	BP 04.02 Define the Problem.
SP 1.2-1-2c Capture relationships between requirements for consideration during change management and requirements allocation.	BP 02.07 Record and baseline requirements.
SP 1.2-1-2d Maintain this status of requirements.	BP 02.07 Record and baseline requirements.
SP 1.2-1-3 Use validated models, simulations, and prototyping to reduce cost and risk of system development.	BP 13.04 Develop Risk Mitigation Plans.
SP 1.2-2-1a Partition requirements into groups, based on established criteria (such as similar functionality, performance, or coupling) to facilitate and focus the requirements analysis.	BP 02.01 Identify Functional and Performance Requirements. BP 02.07 Record and baseline requirements.
SP 1.2-2-1b Consider the sequencing of time-critical functions both initially and subsequently during system component development.	BP 02.01 Identify Functional and Performance Requirements. BP 03.05 Define Interactions among Design Elements.
SP 1.2-2-1c Identify interface requirements associated with things external to the system and internally between functional partitions or objects.	BP 02.05 Identify external interface requirements.
SP 1.2-2-1d Establish a derived requirements baseline, including the allocation of requirements to subsystems and system components.	BP 02.07 Record and baseline requirements.
SP 1.2-2-1e Allocate requirements to functional partitions, objects, people, or support elements to support synthesis of solutions.	BP 02.01 Identify Functional and Performance Requirements. BP 03.04 Allocate Requirements.
SP 1.2-2-2a Maintain requirements traceability to ensure that lower level (derived) requirements are necessary and sufficient to meet the objectives of higher level requirements, and are consistent with the product's functional architecture.	BP 02.09 Maintain consistency and traceability.
SP 1.2-2-2b Conduct trade studies or decision analyses to select between competing alternatives in all phases of the requirements process, including initial architecture development and subsequently in allocating requirements to lower levels of functional and physical architectures.	BP 03.02 Develop Design Structure.
SP 1.2-2-3 Capture rationale for system level requirements, derived requirements, allocations, and traceability.	BP 02.07 Record and baseline requirements.
SP 1.2-3-1a Analyze requirements to ensure that they are complete, correct, realizable and verifiable.	BP 02.06 Analyze requirements.
SP 1.2-3-1b Develop and document system and subsystem verification criteria concurrently with requirements development.	BP 08.02 Develop Evaluation Procedures.
SP 1.2-3-2 Formally review or inspect requirements for quality attributes including stability, lack of ambiguity, and traceability to the customer baseline.	BP 02.06 Analyze requirements.
SP 1.2-4-1 Document changes to requirements.	BP 02.08 Analyze and resolve requirements change requests.
SP 1.2-4-2a Establish a process for formally and proactively controlling and managing changes to requirements, considering	BP 02.08 Analyze and resolve requirements change requests.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
impact prior to commitment to change, gaining stakeholder buy-in, and tracking and closing out the actions and results.	
SP 1.2-4-2b Evaluate the impact of requirement changes from the standpoint of all stakeholders.	BP 02.08 Analyze and resolve requirements change requests.
SP 1.2-5-1 Formally review requirements with stakeholders	BP 02.07 Record and baseline requirements.
SP 1.2-5-2a Involve stakeholders in the process of requirements development.	BP 01.05 Communicate with Customers.
SP 1.2-5-2b Baseline (describe, capture, and control) and communicate requirements and functional architectures to all stakeholders.	BP 02.07 Record and baseline requirements.
SP 1.2-5-2c Capture records of communications with stakeholders relative to requirements trade studies and allocations. (CM)	BP 01.05 Communicate with Customers.
SP 1.2-5-3 Periodically review requirements and their relationship with system functional and physical architectures.	BP 02.08 Analyze and resolve requirements change requests.
<b><i>FA 1.3 Define Solution</i></b>	<b><i>PA 03 Design; PA 08 Evaluation; PA 02 Requirements; PA 13 Risk Management</i></b>
SP 1.3-1-1a Capture and maintain a description of solution component features and constraints.	BP 03.08 Establish and Maintain Design Description
SP 1.3-1-1b Generate alternative system concepts physical architectures, and design solutions and select a solution in accordance with FA 1.4 - Assess and Select.	BP 03.02 Develop Design Structure.
SP 1.3-1-1c Identify interfaces between design components and their requirements for specification and management in accordance with the practices of FA 1.5 - Integrate System.	BP 03.03 Develop Interface Specifications.
SP 1.3-1-2a Identify architectural or design issues that must be resolved to support successful development of the system.	BP 03.01 Identify and Prioritize Design Issues.
SP 1.3-1-2b Evolve the operational concept to a level of detail appropriate to each level of physical decomposition and input to the practices of FA 1.2 - Define Technical Problem for maintenance.	BP 03.05 Define Interactions among Design Elements.
SP 1.3-1-2c Record and maintain the solution description and rationale in a way that is accessible to all stakeholders.	BP 03.08 Establish and Maintain Design Description.
SP 1.3-1-2d Assign responsibilities for establishing the system architecture and design, and for enforcing it during development.	GP 2.5 Assign Responsibility
SP 1.3-1-3a Fully define interfaces in terms of origination, destination, stimulus and data characteristics for software, and electrical and mechanical characteristics for hardware.	BP 03.03 Develop Interface Specifications.
SP 1.3-1-3b Plan for evolutionary use of purchased or non-developmental (COTS, GOTS, and reuse) items.	BP 03.07 Establish and Use a Strategy for Non-developmental Items.
SP 1.3-1-3c Develop system design alternatives which consider cost drivers, technology limitations and risk.	BP 03.02 Develop Design Structure.
SP 1.3-1-3d Develop timeline scenarios for system operation and user interaction for each alternative system design.	BP 03.05 Define Interactions among Design Elements.
SP 1.3-1-3e Establish a mechanism for determining if the prototyping of system functions is an appropriate part of the design process.	GP 2.3 Plan the Process (applied to PA 03)
SP 1.3-1-3f Establish a mechanism to identify design issues which should be subjected to decision analysis or trade studies throughout system development.	BP 03.01 Identify and Prioritize Design Issues.
SP 1.3-1-3g Capture the rationale for key (i.e., significant effect on cost, schedule or technical performance) decisions taken or defined.	BP 03.01 Identify and Prioritize Design Issues.
SP 1.3-1-4a Establish a mechanism to identify components which should be designed for reuse.	BP 03.07 Establish and Use a Strategy for Non-developmental Items.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 1.3-1-4b Develop system design alternatives which consider life cycle cost, complexity, system expansion, and growth.	BP 03.02 Develop Design Structure.
SP 1.3-1-4c Consider the evolution of requirement drivers and technology in selecting a preferred solution	BP 03.02 Develop Design Structure.
SP 1.3-1-5 Identify key architectural features which guide future system/product versions and upgrades.	BP 03.08 Establish and Maintain Design Description.
SP 1.3-2-1a Identify the assignment or allocation of requirements to design components and interfaces for recording and maintenance in accordance with requirement management practices of FA 1.2 - Define Technical Problem.	BP 03.04 Allocate Requirements.
SP 1.3-2-1b Identify traceability of derived requirements to parent requirements for recording and maintenance in accordance with requirement management practices of FA 1.2 - Define Technical Problem.	BP 02.07 Record and baseline requirements.
SP 1.3-2-2a Identify requirement performance and functional allocations to design components and interfaces for recording and maintenance in accordance with the requirement management practices of FA 1.2 - Define Technical Problem.	BP 03.04 Allocate Requirements.
SP 1.3-2-2b Allocate key requirements to alternative solution components.	BP 03.04 Allocate Requirements.
SP 1.3-2-3a Identify and allocate appropriate derived requirements that address the effectiveness and cost of life-cycle phases following development, such as production and operation, to the extent they are compatible with business objectives.	BP 03.04 Allocate Requirements.
SP 1.3-2-3b Identify key requirements and design issues for separate tracking per the requirement management practices of FA 1.2 - Define Technical Problem, and for consideration by the practices of FA 2.5 - Manage Risk.	BP 03.01 Identify and Prioritize Design Issues.
SP 1.3-2-3c Review derived and allocated requirements for completeness and correctness against established criteria and in the context of operational concept threads or scenarios in accordance with the practices of FA 1.6 - Verify System.	BP 08.04 Evaluate incremental work products.
SP 1.3-2-3d Identify evolving requirement issues and their impacts to ongoing programs as inputs to the requirement management practices of FA 1.2 – Define Technical Problem	BP 03.01 Identify and Prioritize Design Issues.
SP 1.3-2-3e Identify design constraints as requirements for each level of design.	BP 03.06 Establish Component Specifications.
SP 1.3-2-3f Capture the rationale for requirement allocation decisions.	BP 03.04 Allocate Requirements.
SP 1.3-3-1 Conduct internal and formal design reviews to verify that the design meets requirements.	BP 08.04 Evaluate incremental work products.
SP 1.3-3-2a Identify design risk areas for input to the practices of FA 2.5 – Manage Risk, and resolve risk items through analysis, prototyping, modeling or simulation.	BP 13.02 Identify Risks.
SP 1.3-3-2b Review component requirements to assure that the components are necessary and sufficient for meeting higher level requirements.	BP 08.04 Evaluate incremental work products.
SP 1.3-3-3 Verify that the implemented design will meet functional and performance requirements, through analysis, prototyping, modeling or simulation.	BP 08.04 Evaluate incremental work products.
<b>FA 1.4 Assess and Select</b>	<b>PA 04 Alternatives Analysis</b>
SP 1.4-1-1 Use structured decision making techniques to resolve technical issues.	BP 04.01 Establish Analysis Strategy.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 1.4-1-2 Select appropriate decision-making technique and record rationale for choice.	BP 04.03 Select Analysis Method.
SP 1.4-2-1 Consider all alternatives presented when making a decision.	BP 04.04 Identify Alternative Solutions.
SP 1.4-2-2 Identify alternatives for consideration in addition to those supplied with the problem statement.	BP 04.04 Identify Alternative Solutions.
SP 1.4-3-1 Use established, documented evaluation criteria.	BP 04.01 Establish Analysis Strategy.
SP 1.4-3-2a Evaluate the reasonableness and validity of assumptions.	BP 04.05 Analyze Alternative Solutions.
SP 1.4-3-2b Consider sensitivity of analysis results when establishing evaluation criteria.	BP 04.05 Analyze Alternative Solutions
SP 1.4-3-3a Include technology limitations, environmental impact, and risks in evaluation criteria.	BP 04.05 Analyze Alternative Solutions
SP 1.4-3-3b Include total ownership and life-cycle costs in evaluation criteria.	BP 04.05 Analyze Alternative Solutions
SP 1.4-3-3c Capture the rationale for the selection and rejection of evaluation criteria.	BP 04.07 Communicate Analysis Results.
SP 1.4-4-1a Select a balanced solution based on established criteria.	BP 04.06 Select Solution.
SP 1.4-4-1b Involve affected parties in the selection of preferred alternatives.	BP 04.06 Select Solution.
SP 1.4-4-2 Capture and communicate decisions and their rationale to affected parties.	BP 04.07 Communicate Analysis Results.
SP 1.4-4-3 Record alternative solutions and the rationale for rejection.	BP 04.07 Communicate Analysis Results.
<b>FA 1.5 Integrate System</b>	<b>PA 07 Integration; PA 03 Design; PA 08 Evaluation; PA 11 Project Management; PA 04 Alternatives Analysis</b>
SP 1.5-1-1 Develop an integration strategy.	BP 07.01 Develop Integration Strategy.
SP 1.5-1-2 Document integration strategy as part of an integration plan.	BP 07.01 Develop Integration Strategy.
SP 1.5-1-3a Develop the integration plan early in the program.	BP 07.01 Develop Integration Strategy.
SP 1.5-1-3b When multiple teams are involved with system development, establish and follow a formal procedure for coordinating integration activities.	GP 2.15 Coordinate with Stakeholders.
SP 1.5-1-4a Review the integration strategy on a continuous basis.	GP 2.11 Objectively Verify Work Products.
SP 1.5-1-4b Capture rationale for decisions taken and deferred.	BP 04.07 Communicate Analysis Results.
SP 1.5-1-5 Improve standard integration strategies based upon rationale for decisions which resulted in improved integration performance.	GP 3.3 Improve Processes.
SP 1.5-2-1a Coordinate interface definition, design, and changes between affected groups and individuals throughout the life cycle.	BP 07.03 Review and Coordinate Interface Definitions.
SP 1.5-2-1b Identify interface requirements baselines.	GP 2.9 Manage Work Products
SP 1.5-2-2a Review interface data.	BP 07.03 Review and Coordinate Interface Definitions.
SP 1.5-2-2b Ensure complete coverage of all interfaces.	BP 07.03 Review and Coordinate Interface Definitions.
SP 1.5-2-3a Capture all interface designs in a common interface control format.	BP 03.08 Establish and Maintain Design Description.
SP 1.5-2-3b Capture interface design rationale.	BP 03.08 Establish and Maintain Design Description.
SP 1.5-2-3c Store interface data in a commonly accessible repository.	BP 03.08 Establish and Maintain Design Description.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 1.5-2-4 Review the adequacy of interface documentation periodically.	BP 07.03 Review and Coordinate Interface Definitions.
SP 1.5-3-1a Verify the receipt of each system element (component) required to assemble the system in accordance with the physical architecture.	BP 07.02 Confirm Readiness of Product and Service Elements.
SP 1.5-3-1b Verify that the system element interfaces comply with the interface documentation prior to assembly.	BP 08.04 Evaluate incremental work products.
SP 1.5-3-2 Coordinate the receipt of system elements for system integration according to the planned integration strategy.	BP 07.02 Confirm Readiness of Product and Service Elements.
SP 1.5-4-1a Assemble aggregates of system elements in accordance with the integration plan.	BP 07.04 Assemble Product and Service Elements.
SP 1.5-4-1b Checkout assembled aggregates of system elements.	BP 07.05 Confirm Integrated Product or Service Operation.
SP 1.5-4-4 When multiple organizations are involved in system integration, periodically assess the quality of their mutual interaction to improve the program-level integration effort.	BP 11.11 Review and Analyze Project Performance.
<b>FA 1.6 Verify System</b>	<b>PA 08 Evaluation</b>
SP 1.6-1-1 Plan the set of comprehensive, integrated verification activities, addressing all certification requirements, objectives, resources, facilities, special equipment, and schedules applicable to the system development.	BP 08.01 Develop Evaluation Strategy.
SP 1.6-1-2a Include realistic operational and environmental scenarios in system verification plans.	BP 08.01 Develop Evaluation Strategy.
SP 1.6-1-2b Review verification plans early with peers within the developer's organization and with other system stakeholders to assess risky aspects of system development and to agree on alternative courses of action in the event of failures while conducting verification.	BP 08.04 Evaluate incremental work products.
SP 1.6-1-3 Require development of verification plans in organizational policy.	GP 2.1 Establish Organizational Policy.
SP 1.6-2-1 Define the methods, process, and evaluation criteria by which the systems, subsystems and work products are verified against their requirements in a written plan.	BP 08.02 Develop Evaluation Procedures.
SP 1.6-2-2 Identify the individual or team responsible for verification in the verification plan and assign qualified personnel per the plan.	GP 2.5 Assign Responsibility.
SP 1.6-2-3a Adjust system requirements and development plans appropriately according to risks of failing system verification.	BP 08.04 Evaluate incremental work products.
SP 1.6-2-3b Acquire test equipment and software and items to be tested according to a comprehensive strategy that enables reuse.	BP 08.03 Establish and Maintain Evaluation Environment.
SP 1.6-2-3c Validate test or analysis procedures and support facilities.	BP 08.02 Develop Evaluation Procedures.
SP 1.6-3-1a Perform re-verification of corrected deficiencies and changed requirements and designs.	BP 08.07 Analyze Evaluation Results.
SP 1.6-3-1b Inspect implemented, purchased, and reused components to verify they meet requirements.	BP 08.05 Verify end-Products.
SP 1.6-3-2a Test new and unproven designs (i.e., highest risk) at the lowest assembly level to verify their compliance with established requirements early in the development life cycle.	BP 08.04 Evaluate incremental work products.
SP 1.6-3-2b Review the incremental verification results vis -à-vis requirements with key stakeholders on an on-going basis.	BP 08.04 Evaluate incremental work products.
SP 1.6-3-2c Verify system, subsystem, and work products against requirements established in an earlier phase.	BP 08.04 Evaluate incremental work products.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 1.6-3-2d Perform incremental verification on systems, subsystems, and work products.	BP 08.04 Evaluate incremental work products.
SP 1.6-4-1 Compare the collected test, inspection, or review results with established evaluation criteria to assess the degree of success.	BP 08.07 Analyze Evaluation Results.
SP 1.6-4-2a Involve all product stakeholders in the review of system verification results and issues.	BP 08.07 Analyze Evaluation Results.
SP 1.6-4-2b Inform stakeholders of the results of verification activities.	BP 08.07 Analyze Evaluation Results.
SP 1.6-4-3 Use verification results to compare actual measurements and performance to technical performance parameters.	BP 08.07 Analyze Evaluation Results.
<b><i>FA 1.7 Validate System</i></b>	<b><i>PA 08 Evaluation; PA 01 Needs; PA 11 Project Management</i></b>
SP 1.7-1-1 Develop a strategy for system validation.	BP 08.01 Develop Evaluation Strategy.
SP 1.7-1-2 Define requirements for a realistic operational, maintenance, and support environment.	BP 08.01 Develop Evaluation Strategy.
SP 1.7-1-3 Formally document the environment, operational scenario, test procedures, inputs, outputs, expected results, and evaluation criteria for the system validation plan.	BP 08.02 Develop Evaluation Procedures.
SP 1.7-2-1 Conduct early requirements validation in some fashion on the program to reduce the risk of failing system validation.	BP 08.04 Evaluate incremental work products.
SP 1.7-2-2 Provide appropriate tools to support system requirement validation activities (e.g., rapid prototyping, simulation, decision making, etc.).	BP 08.03 Establish and Maintain Evaluation Environment.
SP 1.7-2-3 Factor system validation issues into risk analysis.	BP 13.02 Identify Risks.
SP 1.7-2-4 Review the results of early validation periodically to assess the adequacy of the system design as it matures, with corrective action taken as necessary.	BP 08.07 Analyze Evaluation Results.
SP 1.7-3-1 Perform operational test and evaluation in some manner.	BP 08.06 Validate end-products.
SP 1.7-3-2a Perform operational, maintenance, and support test and evaluation.	BP 08.06 Validate end-products.
SP 1.7-3-2b Provide appropriate tools to support system validation activities, both simulations and actual systems.	BP 08.03 Establish and Maintain Evaluation Environment.
SP 1.7-4-1 Assess system validation issues for their impact on the program.	BP 08.07 Analyze Evaluation Results.
SP 1.7-4-2a Coordinate the resolution of validation issues among affected projects within the program.	GP 2.15 Coordinate With Participants and Stakeholders
SP 1.7-4-2b Use the results of early validation to support tracking and oversight of technical performance parameters.	BP 11.10 Monitor Project Performance.
SP 1.7-4-3a Include early validation activities as part of concept definition to reduce risk of specifying invalid requirements.	BP 01.03 Analyze Needs.
SP 1.7-4-3b Include system validation issues (e.g., unanticipated or unintended functions or behavior) as an integral part of all formal, system level design reviews.	BP 08.04 Evaluate incremental work products.
<b><i>FA 2.1 Plan and Organize</i></b>	<b><i>PA 11 Project Management</i></b>
SP 2.1-1-1 Identify resources that are critical to the technical success of the program.	BP 11.04 Estimate Project Resource Requirements.
SP 2.1-1-2a Reconcile the level of technical work required for the program to the available level of funding or projected market potential.	BP 11.07 Establish Commitment.
SP 2.1-1-2b Assign responsibility for developing the technical management plan.	GP 2.5 Assign Responsibility.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 2.1-1-2c Designate a system engineering first-line manager or team leader to be responsible for negotiating technical commitments.	GP 2.5 Assign Responsibility.
SP 2.1-2-1a Determine a technical approach for the program.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-2-1b Estimate the magnitude and technical feasibility of the program.	BP 11.03 Estimate Planning Parameters.
SP 2.1-2-2a Identify technical activities for the entire life cycle of the program.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-2-2b Identify key technical performance parameters.	BP 11.03 Estimate Planning Parameters.
SP 2.1-2-2c Establish thresholds or profiles for key technical performance parameters.	BP 11.03 Estimate Planning Parameters.
SP 2.1-2-3 Identify and define a system life cycle with predefined stages of manageable size.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-3-1a Generate a work breakdown structure for the program that defines logical units of work to be managed at the program level.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-3-1b Develop cost estimates for the technical aspects of the program.	BP 11.04 Estimate Project Resource Requirements.
SP 2.1-3-1c Generate documented and approved statements of work for systems engineering activities.	BP 11.06 Establish and Maintain Plans.
SP 2.1-3-2a Define systems engineering work products, including data requirements, and activities in a traceable and accountable manner, including data requirements.	BP 11.01 Define Project Objectives, Scope, and Outputs. BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-3-2b Ensure the technical management plan provides form and context for the planned technical activities and identify products.	BP 11.06 Establish and Maintain Plans.
SP 2.1-3-2c Ensure the work breakdown structure covers all the tasks and products necessary for the program.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-3-3a Derive estimates for the size and cost of the systems engineering work products and efforts based upon historical data.	BP 11.04 Estimate Project Resource Requirements.
SP 2.1-3-3b Consider whether a system is preceded or unprecedented when generating estimates of the engineering effort.	BP 11.04 Estimate Project Resource Requirements.
SP 2.1-3-3c Capture the basis or rationale for systems engineering planning and estimates.	BP 11.04 Estimate Project Resource Requirements.
SP 2.1-3-3d Assure that the work breakdown structure reviewed is complete- and consistent with the system or product structure.	BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-4-1 Develop schedules for the current life cycle phase as a part of the planning activities.	BP 11.05 Establish Schedules.
SP 2.1-4-2a Develop top level schedules for the remaining life cycle phases of the program.	BP 11.05 Establish Schedules.
SP 2.1-4-2b Address task dependencies as a part of scheduling.	BP 11.05 Establish Schedules.
SP 2.1-4-3 Provide traceability between the schedule (calendar-based plan) and the event-driven plan.	BP 11.05 Establish Schedules.
SP 2.1-5-1a Develop a technical management plan for the program.	BP 11.06 Establish and Maintain Plans.
SP 2.1-5-1b Ensure there are clear lines of responsibility and authority between systems engineering and program management.	BP 11.08 Organize to meet Project Objectives.
SP 2.1-5-2a Assign responsibility for program planning.	GP 2.5 Assign Responsibility.
SP 2.1-5-2b Include in the technical management plan provisions to maintain the plan and for recording deviations from the plan.	BP 11.06 Establish and Maintain Plans.
SP 2.1-5-2c Document the program roles, responsibilities, and objectives for each organization or functional discipline.	BP 11.06 Establish and Maintain Plans. BP 11.08 Organize to meet Project Objectives.
SP 2.1-5-2d Develop an event driven plan for technical aspects of the program.	BP 11.06 Establish and Maintain Plans.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 2.1-5-2e Review technical plans with stakeholders and obtain their commitment.	BP 11.07 Establish Commitment.
SP 2.1-5-3a Ensure the systems engineering activities and work products that are needed to establish and maintain control of the program are well defined.	BP 11.01 Define Project Objectives, Scope, and Outputs. BP 11.02 Define the Activities and Life Cycle Approach.
SP 2.1-5-3b Conduct formal reviews of the technical management plan to assess its consistency with the top-level program management plan and with lower-level plans.	BP 11.07 Establish Commitment.
<b><i>FA 2.2 Monitor and Control</i></b>	<b><i>PA 11 Project Management; PA 18 Measurement and Analysis</i></b>
SP 2.2-1-1 Determine the degree of oversight for programs needing monitoring and controlling to promote the organization's goals.	BP 11.06 Establish and Maintain Plans.
SP 2.2-1-2 Establish criteria against which each program is evaluated to determine if it should be under the Monitor and Control FA activities.	BP 11.06 Establish and Maintain Plans.
SP 2.2-2-1 Track the resources expended, the program schedule, and the technical performance measurements against the plan.	BP 11.10 Monitor Project Performance.
SP 2.2-2-3 Evaluate and document the program's efforts for the lessons learned.	BP 11.10 Monitor Project Performance.
SP 2.2-3-1a Periodically collect and analyze the measures of program and technical performance.	BP 11.10 Monitor Project Performance. BP 18.02 Collect relevant measurement data.
SP 2.2-3-1b Implement corrective action when measures deviate from expected results.	BP 11.12 Take Corrective Action.
SP 2.2-3-4 Analyze and use prediction based on the program's measures to determine if the program's completion is at risk and thus warrants corrective action.	BP 11.11 Review and Analyze Project Performance.
<b><i>FA 2.3 Integrate Disciplines</i></b>	<b><i>PA 14 Integrated Teaming</i></b>
SP 2.3-1-1 Involve all essential disciplines, including both traditional and specialty engineering, in the system development process in a timely manner	BP 14.02 Establish and Maintain Integrated Teams
SP 2.3-1-2 Adjust the mix of disciplines involved in each phase of system development as appropriate to the work being done.	BP 14.02 Establish and Maintain Integrated Teams
SP 2.3-1-3a Involve personnel from affected groups in planning and other systems engineering activities (i.e., developing, reviewing, allocating, and approving requirements) that affect them.	BP 14.02 Establish and Maintain Integrated Teams
SP 2.3-1-3b Allow systems engineering personnel to review and agree to designs, plans, and work products produced by other engineering disciplines or that affect multiple disciplines.	BP 14.02 Establish and Maintain Integrated Teams
SP 2.3-2-1 Proactively emphasize the importance of intergroup coordination.	BP 14.02 Establish and Maintain Integrated Teams BP 14.03 Establish and Maintain a Collaborative Workplace
SP 2.3-2-2a Capture and communicate intergroup coordination activities and the results of those activities.	BP 14.06 Communicate Integrated Team Activity Results
SP 2.3-2-2b Establish tools, methods, facilities (e.g., team rooms), and an information infrastructure that eases and supports interdisciplinary coordination.	BP 14.04 Establish Coordination and Communication Methods
SP 2.3-2-3a Provide means for individuals and groups to acquire skills that facilitate interdisciplinary cooperation, such as communication skills, group problem solving, and active listening.	BP 14.04 Establish Coordination and Communication Methods
SP 2.3-2-3b Plan for and provide regular exchanges of technical	BP 14.04 Establish Coordination and

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
information and issue identification and resolution among all stakeholders, including customers.	Communication Methods
SP 2.3-2-3c Establish a mechanism to ensure compliance with commitments made among groups.	BP 14.04 Establish Coordination and Communication Methods
SP 2.3-2-4 Espouse and model appropriate communication skills and interdepartmental cooperation on the part of upper management.	BP 14.04 Establish Coordination and Communication Methods
SP 2.3-3-1 Establish and use a process or method for identifying and resolving interdisciplinary issues.	BP 14.05 Establish Resolution Methods
SP 2.3-3-2 Communicate interdisciplinary issues and activities to affected groups, including program/project management and customer, supplier, and associate stakeholders.	BP 14.05 Establish Resolution Methods
SP 2.3-3-3 Establish a process for escalating and arbitrating technical differences, including a mechanism for authoritative resolution of conflicts.	BP 14.05 Establish Resolution Methods
<b><i>FA 2.4 Coordinate with Suppliers</i></b>	<b><i>PA 05 Outsourcing; PA 12 Supplier Agreement Management; PA 08 Evaluation</i></b>
SP 2.4-1-1 The organization identifies system components or services that will be provided by internal & external suppliers.	BP 05.01 Identify Needed Products or Services:
SP 2.4-1-2 The organization performs trade studies to determine make-vs-buy decisions based on business needs.	BP 05.01 Identify Needed Products or Services:
SP 2.4-2-1 Capable suppliers are chosen according to FA 1.4 - Assess and Select.	BP 05.02 Identify Competent Suppliers BP 05.04 Choose Supplier
SP 2.4-2-2a Criteria are established to evaluate potential suppliers that meet program and organization objectives.	BP 05.03 Prepare for the Solicitation or Tasking
SP 2.4-2-2b Suppliers are selected based upon input from the systems engineering team leader.	BP 5.04 Choose Supplier
SP 2.4-2-3 Suppliers are selected based on an evaluation of the supplier's ability to perform the work.	BP 05.02 Identify Competent Suppliers BP 05.04 Choose Supplier
SP 2.4-3-1 The organization provides the supplier with the needs, expectations, and measures of effectiveness for the system components and services to be delivered.	BP 05.05 Communicate with Suppliers
SP 2.4-3-2a When suppliers are used on the program, requirements for the work are formally documented.	BP 05.03 Prepare for the Solicitation or Tasking
SP 2.4-3-2b Requirements changes are re-negotiated with the supplier and the changes documented.	BP 12.03 Maintain Supplier Agreement Integrity
SP 2.4-3-3 There is a clearly documented agreement that contains a statement of work, specification, terms and conditions, a list of deliverables, a schedule, budget, and a defined acceptance process.	BP 5.05 Communicate with Suppliers
SP 2.4-3-4 The selected supplier is involved early in the program to assist in the requirements development and definition.	BP 5.05 Communicate with Suppliers
SP 2.4-4-1 The supplier's progress (schedule, cost, technical performance) is managed.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-2a Those involved in managing the supplier receive orientation in the technical aspects of the documented agreement.	GP 2.6 Ensure Skill and Knowledge
SP 2.4-4-2b The supplier's quality and configuration control activities are monitored.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-2c Acceptance testing is conducted as part of the delivery of the supplier's products.	BP 08.05 Verify end-Products.
SP 2.4-4-3a The documented agreement between the acquirer and the supplier is used as the basis for managing the supplier.	BP 12.02 Review and Monitor Agreement Performance

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 2.4-4-3b Periodic informal reviews, technical reviews, and interchanges are held with the supplier.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-3c Formal reviews are conducted at selected milestones to address supplier's systems engineering accomplishments and results.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-3d Discrepancies discovered during acceptance testing are used to improve the supplier's processes and products.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-3e There is a mechanism for assuring that all suppliers follow their defined engineering process.	BP 12.02 Review and Monitor Agreement Performance
SP 2.4-4-4a Systems engineering personnel participate in and approve the plans, process, and product standards used by suppliers.	GP 2.5 Assign Responsibility.
SP 2.4-4-4b There is a mechanism for establishing and nurturing long term relationships with preferred suppliers.	BP 5.05 Communicate with Suppliers.
<b>FA 2.5 Manage Risk</b>	<b>PA 13 Risk Management; PA 14 Integrated Teaming</b>
SP 2.5-1-1 Plan risk management activities.	GP 2.3 Plan the Process.
SP 2.5-1-2 Provide an approved risk management plan containing risk levels and expected management response for each level.	GP 2.3 Plan the Process.
SP 2.5-1-3 Implement risk management for key processes within the program: design, test, manufacturing, etc.	BP 13.01 Develop Risk Management Approach.
SP 2.5-2-1 Identify performance risks.	BP 13.02 Identify Risks.
SP 2.5-2-2 Identify cost and schedule risks.	BP 13.02 Identify Risks.
SP 2.5-2-3 Review all elements of the work breakdown structure as part of the risk identification process in order to help ensure that all program aspects have been considered.	BP 13.02 Identify Risks.
SP 2.5-3-1 Assess risks qualitatively.	BP 13.03 Assess Risks.
SP 2.5-3-2 Assess each risk and determine the probability of occurrence and quantified consequence of impact for the program.	BP 13.03 Assess Risks.
SP 2.5-4-3a Review the analysis of risks for adequacy and completeness.	GP 2.11 Objectively Verify Work Products.
SP 2.5-4-3b For each risk, establish cause and effect relationships.	BP 13.03 Assess Risks.
SP 2.5-4-3c Analyze each risk for potential coupling to all other identified risks.	BP 13.03 Assess Risks.
SP 2.5-4-3d Develop alternative courses of action, work-arounds, and fall-back positions with a recommended course of action for each risk.	BP 13.04 Develop Risk Mitigation Plans.
SP 2.5-4-4 Use collected metrics regarding identified risks and examine them in light of previous risk analyses, and when established thresholds are exceeded, initiate corrective action.	BP 13.03 Assess Risks.
SP 2.5-5-2 Categorize risks into those that can be avoided, controlled, or accepted.	BP 13.03 Assess Risks.
SP 2.5-5-3a Document risk reduction profiles and review them for appropriateness.	BP 13.04 Develop Risk Mitigation Plans.
SP 2.5-5-3b Review risk mitigation (handling) including risk reduction profile for adequacy and completeness.	GP 2.11 Objectively Verify Work Products.
SP 2.5-6-2 Implement the risk mitigation strategy for the program.	BP 13.05 Implement and Monitor Risk Mitigation Plans.
SP 2.5-6-3 Document risk analysis results and mitigation plans.	BP 13.05 Implement and Monitor Risk Mitigation Plans.
SP 2.5-7-3a Monitor and re-evaluate risks at appropriate milestones.	BP 13.05 Implement and Monitor Risk Mitigation Plans.
SP 2.5-7-3b Provide the results of risk monitoring activities to affected personnel and disciplines.	GP 2.15 Coordinate with Stakeholders.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 2.5-7-3c Provide a mechanism for monitoring corrective actions taken and tracking open risk items to closure.	GP 2.12 Measure Performance.
SP 2.5-7-4 During risk monitoring, identify and analyze new risks and take corrective action.	BP 13.05 Implement and Monitor Risk Mitigation Plans.
SP 2.5-8-1 Establish a communication path between the risk management team and the program management team.	GP 2.15 Coordinate with Stakeholders.
SP 2.5-8-2a Involve a multi-functional group for risk management that spans both technical and business specialties –involve appropriate stakeholders	BP 14.02 Establish and Maintain Integrated Teams.
SP 2.5-8-2b Integrate risk management both vertically and horizontally across the program.	BP 13.01 Develop Risk Management Approach.
SP 2.5-8-3 Include risk management as a part of program formal reviews.	GP 2.13 Review Performance with Higher-level Management.
<b>FA 2.6 Manage Data</b>	<b>PA 17 Information Management</b>
SP 2.6-1-1 Establish program data and data management requirements.	BP 17.01 Establish Information Management Strategy.
SP 2.6-1-2 Review data management activities periodically to confirm that the program data requirements are still valid and on schedule.	BP 17.01 Establish Information Management Strategy. GP 2.11 Objectively Verify Work Products. GP 2.10 Objectively Assess Process Compliance.
SP 2.6-1-3 Establish program data requirements based upon a common or standard set of data requirements.	BP 17.01 Establish Information Management Strategy.
SP 2.6-1-3 Establish program data requirements based upon a common or standard set of data requirements.	BP 17.06 Establish Information Standards.
SP 2.6-2-1 Inspect program data for compliance to data requirements prior to delivery or archiving.	GP 2.11 Objectively Verify Work Products.
SP 2.6-2-2 Ensure that the process for review, approval and release of data is well understood through the program	GP 2.15 Coordinate with Stakeholders.
SP 2.6-3-1 Archive program data.	BP 17.03 Store Information.
SP 2.6-3-2 Establish a capability to retrieve desired program data quickly.	BP 17.04 Share Information.
SP 2.6-3-3a Provide a common data management archival and retrieval capability throughout the organization.	BP 17.02 Establish Information Management Capability.
SP 2.6-3-3b Archive data efficiently based upon common characteristics (e.g., key words, topics, contract number, etc.).	BP 17.03 Store Information.
SP 2.6-4-1 Changes to data requirements and data are controlled and communicated.	GP 2.9 Manage Work Products.
SP 2.6-5-1 Record and maintain the status of program data.	BP 17.04 Share Information.
SP 2.6-5-2a Communicate status reports documenting data management activities to appropriate groups and individuals.	BP 17.04 Share Information.
SP 2.6-5-2b Alert individuals having responsibility for the generation of program data of upcoming milestones and delivery dates	GP 2.15 Coordinate with Stakeholders.
<b>FA 2.7 Manage Configurations</b>	<b>PA 16 Configuration Management</b>
SP 2.7-1-1 Identify, baseline, and control work products that define the product.	BP 16.02 Identify and Baseline Configuration Items and Interim Work Products. BP 16.03 Establish and Maintain a Repository for Work Product Baselines. BP 16.04 Control Changes.
SP 2.7-1-2a Identify, baseline, and control work products from all Focus Areas that are critical enough to require configuration management.	BP 16.01 Establish a Configuration Management Strategy. BP 16.02 Identify and Baseline Configuration

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
	Items and Interim Work Products. BP 16.04 Control Changes.
SP 2.7-1-2b Maintain a repository of work product baselines.	BP 16.03 Establish and Maintain a Repository for Work Product Baselines.
SP 2.7-1-2c Maintain the capability to store, manage, retrieve, and distinguish multiple versions of product elements and work products.	BP 16.03 Establish and Maintain a Repository for Work Product Baselines.
SP 2.7-1-3 Formally control release of products created from the baseline library.	BP 16.03 Establish and Maintain a Repository for Work Product Baselines. BP 16.04 Control Changes.
SP 2.7-2-1 Changes to established baselines are recorded, reviewed, approved, controlled, and verified as incorporated.	BP 16.03 Establish and Maintain a Repository for Work Product Baselines. BP 16.04 Control Changes. BP 16.05 Record and Report Configuration Status. BP 16.06 Conduct Configuration Audits and Inspections.
SP 2.7-2-2 Changes are evaluated through a process that ensures they are consistent with all the technical and program requirements.	BP 16.04 Control Changes. BP 16.06 Conduct Configuration Audits and Inspections.
SP 2.7-2-3 Changes are evaluated for their impact beyond the immediate program or contract requirements.	BP 16.01 Establish a Configuration Management Strategy. BP 16.04 Control Changes.
SP 2.7-3-1 Status of configuration data, changes, and access information is recorded, tracked, and communicated to affected groups.	BP 16.05 Record and Report Configuration Status.
SP 2.7-4-1 Periodically audit configuration management activities and processes to confirm that the resulting baselines and documentation are accurate and record audit results.	BP 16.06 Conduct Configuration Audits and Inspections.
<b><i>FA 2.8 Ensure Quality</i></b>	<b><i>PA 15 Quality Assurance and Management</i></b>
SP 2.8-1-1 Communicate management's role in quality activities and improvements to the program team.	GP 2.5 Assign Responsibility.
SP 2.8-1-2a Assign responsibility for quality activities and improvements to the program team.	GP 2.5 Assign Responsibility.
SP 2.8-1-2b Create an environment that encourages employee participation in identifying, reporting, and solving quality issues.	BP 15.06 Initiate Quality Improvement.
SP 2.8-2-1 Evaluate work products and system elements against requirements.	BP 15.03 Monitor Product and Service Quality.
SP 2.8-2-2 Establish a process to detect the need for corrective actions to products and processes.	BP 15.05 Analyze Quality.
SP 2.8-2-3a Evaluate processes for adherence to standards and policies throughout the system life cycle.	BP 15.03 Monitor Product and Service Quality.
SP 2.8-2-3b Perform in-progress or incremental evaluations of work products and system elements against requirements.	BP 15.03 Monitor Product and Service Quality.
SP 2.8-2-4 Feed back lessons learned into processes for robustness of future designs.	BP 15.05 Analyze Quality. BP 15.06 Initiate Quality Improvement.
SP 2.8-3-1 Use quality improvement tools in a disciplined manner to reduce defects and improve productivity.	BP 15.05 Analyze Quality.
SP 2.8-3-2 Provide readily available, just-in-time training on the use of advanced quality improvement tools.	BP 15.06 Initiate Quality.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
<b><i>FA 3.1 Define and Improve the Systems Engineering Process</i></b>	<b><i>PA 21 Process Improvement; PA 20 Process Definition; PA 15 Quality Assurance and Management</i></b>
SP 3.1-1-2 Establish systems engineering process goals from the organization's business goals.	BP 21.01 Identify Process Improvement Goals.
SP 3.1-1-3a Assign responsibility and provide necessary resources to plan, implement, and communicate the organization's standard systems engineering process.	GP 2.4 Provide Adequate Resources. GP 2.5 Assign Responsibility.
SP 3.1-1-3b Document rationale for selection and inclusion of best practices in the organization's standard systems engineering process.	BP 20.01 Establish Standard Processes.
SP 3.1-2-2 Establish a process library for systems engineering process assets developed and collected by the program.	BP 20.03 Maintain Process Assets.
SP 3.1-2-3a Establish and assertively manage a library for systems engineering process assets developed and collected by the organization.	BP 20.03 Maintain Process Assets.
SP 3.1-2-3b Ensure that tailoring reports from application of the organization's standard systems engineering process to specific programs are recorded in the process library.	BP 20.03 Maintain Process Assets.
SP 3.1-2-3c Ensure that program results of applying the organization's standard systems engineering process are recorded in the process asset library.	BP 20.03 Maintain Process Assets.
SP 3.1-3-1 Identify existing systems engineering processes for use on programs.	BP 20.03 Maintain Process Assets.
SP 3.1-3-2a Establish and follow a written organizational policy (may be part of a broad-based policy) for implementing and maintaining systems engineering process (es).	BP 21.01 Identify Process Improvement Goals. GP 2.1 Establish Organizational Policy
SP 3.1-3-2b Describe and present the organizational policy clearly and completely to all engineering and program personnel.	BP 20.04 Coordinate and Communicate Process Definition.
SP 3.1-3-3a Plan, approve, and establish process management and improvement activities according to a formal procedure.	BP 21.04 Establish an Action Plan. GP 2.2 Document the Process GP 2.3 Plan the Process
SP 3.1-3-3b Develop and document a standard systems engineering process for the organization based on industry standards and industry-wide best practices.	BP 20.03 Maintain Process Assets.
SP 3.1-3-3c Define clearly the inputs and outputs of the sub-processes that comprise the systems engineering process.	BP 20.01 Establish Standard Processes.
SP 3.1-3-3d Define entrance and exit criteria for each major activity in the systems engineering process.	BP 20.01 Establish Standard Processes.
SP 3.1-3-3e Define a set of standard methods for use with the organization's standard systems engineering process used on programs.	BP 20.01 Establish Standard Processes.
SP 3.1-3-3f Establish a formal process for implementing and improving Systems Engineering Activities.	GP 2.2 Document the Process
SP 3.1-3-5 Integrate the systems engineering process with other engineering and enterprise processes to establish a unified product development process.	BP 20.01 Establish Standard Processes:
SP 3.1-4-3a Establish a set of tailoring guidelines for the organization's standard systems engineering process that permits the standard process to meet program-specific needs.	BP 20.02 Develop Tailoring Guidelines.
SP 3.1-4-3b Tailoring reports generated by the programs are reviewed and approved by the appropriate individuals (e.g., senior managers or	BP 20.02 Develop Tailoring Guidelines.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
members of the engineering process group).	
SP 3.1-5-2 Assess the program-specific systems engineering processes and determine relative strengths and weaknesses.	BP 21.03 Appraise process.
SP 3.1-5-3a Assess the organization's standard systems engineering process.	BP 21.03 Appraise process.
SP 3.1-5-3b Review root causes of errors or problems to determine whether changes to the systems engineering process are required to prevent future occurrences.	BP 15.05 Analyze Quality.
SP 3.1-5-3c Use a mechanism for periodically assessing the systems engineering process.	BP 21.03 Appraise process.
SP 3.1-5-3d Seek to benchmark the organization's systems engineering process against processes used by other organizations.	BP 21.03 Appraise process.
SP 3.1-5-3e Determine the degree of program use of the organization's defined systems engineering process and methods.	BP 21.03 Appraise process.
SP 3.1-5-4a Measure and analyze systems engineering productivity for each major process activity within the systems engineering process.	BP 21.06 Confirm Improvements.
SP 3.1-5-4b Gather and analyze data from inspections to identify areas for improvement in the systems engineering process.	GP 3.3 Improve Processes:
SP 3.1-5-4c Use uniform systems engineering process metrics across programs.	BP 20.01 Establish Standard Processes.
SP 3.1-5-4d Use a mechanism to evaluate the utility of process metrics collected across all programs.	BP 21.08 Monitor Performance.
SP 3.1-5-5 Use a formal procedure to assure periodic management review of each program and institute changes to the systems engineering process.	BP 21.08 Monitor Performance.
SP 3.1-6-2a Perform improvement of systems engineering process (es) in use on programs in at least an informal manner.	BP 21.05 Implement Improvements
SP 3.1-6-2b Identify and communicate best practices within the organization to programs.	BP 21.03 Appraise process
SP 3.1-6-3a Use targeted improvements to change the organization's systems engineering process.	BP 21.05 Implement Improvements
SP 3.1-6-3b Provide a mechanism for users to identify proposed improvements to the systems engineering process.	BP 20.04 Coordinate and Communicate Process Definition:
SP 3.1-6-3c Communicate the existence and improvement of the organization's standard systems engineering process to all affected groups and programs.	BP 20.04 Coordinate and Communicate Process Definition.
<b>FA 3.2 Manage Competency</b>	<b>PA 22 Training</b>
SP 3.2-1-1 Encourage staff to continuously develop skills and knowledge.	BP 22.07 Establish Learning Environment.
SP 3.2-1-2a Reward mentoring as a means of increasing staff competency.	BP 22.07 Establish Learning Environment.
SP 3.2-1-2b Provide a mechanism to develop individual competency development goals consistent with both the individual's career objectives and the program's needs.	BP 22.07 Establish Learning Environment.
SP 3.2-1-3a Provide job opportunity and career advancement based on competency development achievements.	BP 22.07 Establish Learning Environment.
SP 3.2-1-3b Clearly state and communicate competency development opportunities and the relationship between competency development and career opportunity to all personnel within the organization.	BP 22.07 Establish Learning Environment.
SP 3.2-1-3c Provide a mechanism to formally recognize competency development achievements.	BP 22.07 Establish Learning Environment.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>EIA/IS 731 Focus Areas and Practices</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
SP 3.2-1-3d Provide a mechanism for certification of competency achievement.	BP 22.07 Establish Learning Environment.
SP 3.2-2-1 Identify needed improvements in skill and knowledge throughout the organization using the programs' needs, organizational strategic plan, and existing employee skills as guidance.	BP 22.01 Identify Training Needs.
SP 3.2-2-2 Base near term competency development requirements upon immediate program needs.	BP 22.01 Identify Training Needs.
SP 3.2-2-3 Base long term competency development requirements upon the organization's strategic plan.	BP 22.01 Identify Training Needs.
SP 3.2-3-1a Train personnel to have the skills and knowledge needed to perform their assigned roles.	BP 22.04 Train Individuals.
SP 3.2-3-1b Maintain records of training and experience.	BP 22.05 Establish and Maintain Records.
SP 3.2-3-1c Provide knowledge from outside sources when in-house training or learning opportunities are unable to satisfy program needs.	BP 22.03 Establish Training Mechanism.
SP 3.2-3-2a Maintain training materials in an accessible repository.	BP 22.05 Establish and Maintain Records.
SP 3.2-3-2b Assign experienced personnel to perform training.	BP 22.05 Establish and Maintain Records.
SP 3.2-3-2c Involve management personnel in competency development activities, both as recipients and as participants.	BP 22.03 Establish Training Mechanism. BP 22.04 Train Individuals.
SP 3.2-3-2d Provide competency development for critical functional areas (e.g., analysis techniques specific to the organization's problem domains).	BP 22.04 Train Individuals.
SP 3.2-3-3a Integrate competency development opportunities, such as formal education, in-house training, and on-the-job training.	BP 22.04 Train Individuals.
SP 3.2-3-3b Provide cross-discipline technical management training to all disciplines, including program management.	BP 22.04 Train Individuals.
SP 3.2-3-3c Train managers of engineering organizations, team leaders, and engineers on the systems engineering process.	GP 2.6 Ensure Skill and Knowledge.
SP 3.2-3-3d Provide training in the basic principles of systems engineering to quality management, configuration management, and other support personnel.	GP 2.6 Ensure Skill and Knowledge.
SP 3.2-3-3e Provide training in a variety of forms, including formal training, on-the-job training, and just-in-time training, as required to meet program and individual needs.	GP 2.6 Ensure Skill and Knowledge.
SP 3.2-3-3f Integrate tools, methods, and procedures for competency development.	GP 2.4 Provide Adequate Resources.
SP 3.2-4-1a Assess in-progress or completed programs to determine whether staff knowledge was adequate for performing program tasks.	BP 22.06 Assess Training Effectiveness.
SP 3.2-4-1b Provide a mechanism for assessing the effectiveness of each training course with respect to set objectives.	BP 22.06 Assess Training Effectiveness.
SP 3.2-4-2 Require trainers to demonstrate proficiency in the topics for which they intend to train others.	BP 22.06 Assess Training Effectiveness. BP 22.03 Establish Training Mechanism.
SP 3.2-4-3a Provide a mechanism to evaluate students to verify their comprehension of training materials prior to recognition.	BP 22.06 Assess Training Effectiveness.
SP 3.2-4-3b Obtain student evaluations of how well competency development activities meet their needs.	BP 22.06 Assess Training Effectiveness.
SP 3.2-4-3c Establish completion criteria for each training course, documented in standards or course descriptions.	BP 22.06 Assess Training Effectiveness.
SP 3.2-4-4 Provide a mechanism to evaluate alumni capability to perform the style, scope, and intensity of systems engineering that the business needs.	BP 22.06 Assess Training Effectiveness.

GP 2.4 Assign Responsibility	2.5 Assign responsibility
GP 2.5 Train People	2.6 Ensure skill and knowledge
GP 2.6 Manage Configurations	2.9 Manage work products
GP 2.7 Identify and Involve Relevant Stakeholders	2.15 Coordinate with participants and stakeholders
GP 2.8 Monitor and Control the Process	2.12 Measure process performance 2.14 Take corrective action
GP 2.9 Objectively Evaluate Adherence	2.10 Objectively assess process compliance 2.11 Objectively verify work products
GP 2.10 Review Status with Higher-Level Management	2.13 Review performance with higher-level management
<b>GG 3 Institutionalize a Defined Process</b>	<b>L3 Goal: The process is institutionalized as a defined process</b>
GP 3.1 Establish a Defined Process	3.1 Standardize the process 3.2 Establish and use a defined process
GP 3.2 Collect Improvement Information	3.3 Improve processes
<b>GG 4 Institutionalize a Quantitatively Managed Process</b>	<b>L4 Goal: The process is institutionalized as a quantitatively managed process.</b>
GP 4.1 Establish Quality Objectives	4.1 Stabilize process performance
GP 4.2 Stabilize Subprocess Performance	4.1 Stabilize process performance
<b>GG 5 Institutionalize an Optimizing Process</b>	<b>L5 Goal: The process is institutionalized as an optimizing process.</b>
GP 5.1 Ensure Continuous Process Improvement	5.1 Pursue process optimization
GP 5.2 Correct Common Cause of Problems	5.1 Pursue process optimization

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

### President's Quality Award/Malcolm Baldrige National Quality Award Criteria\* to FAA-iCMM v2.0

President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items	FAA-iCMM v2.0 Process Areas and Practices
<b>1. Leadership</b>	<b>PA 00 Integrated Enterprise Management</b>
<i>1.1 Organizational Leadership</i>	<i>PA 00 Integrated Enterprise Management; PA 14 Integrated Teaming; PA 22 Training; PA 23 Innovation</i>
1.1a Senior Leadership Direction	
1-set, communicate, deploy values, expectations, focus	BP 00.01 Establish and maintain strategic vision BP 00.02 Align to achieve the vision
2-establish and reinforce environment	BP 00.01 Establish and maintain strategic vision BP 22.07 Establish Learning Environment BP 14.03 Establish and Maintain a Collaborative Workplace BP 23.05 Manage Innovation:
3-set directions and future opportunities	BP 00.01 Establish and maintain strategic vision
1.1b Organization Performance Review	
1-review organizational performance	BP 00.05 Review performance
2-translate review findings into priorities and opportunities	BP 00.06 Act on results of review
3-deploy findings, priorities, and opportunities	BP 00.06 Act on results of review
4-use findings and feedback to improve leadership and management	BP 00.06 Act on results of review
<i>1.2 Organization Responsibility and Citizenship**</i>	<i>PA 00 Integrated Enterprise Management; PA 13 Risk Management</i>
1.2a Responsibilities to the Public	
1-address impacts and risks on society	BP 00.07 Fulfill public responsibility BP 13.01 Develop Risk Management Approach
2-anticipate public concerns	BP 00.07 Fulfill public responsibility
3-ensure ethical business practices	BP 00.07 Fulfill public responsibility
1.2b Support of Key Communities	BP 00.07 Fulfill public responsibility
<b>2. Strategic Planning</b>	<b>PA 00 Integrated Enterprise Management; PA 18 Measurement and Analysis</b>
<i>2.1 Strategy Development</i>	<i>PA 00 Integrated Enterprise Management; PA 20 Process Definition; PA 04 Alternatives Analysis</i>
2.1a Strategy Development Process	
1-describe strategic planning process	GP 2.2 Document the process; GP 3.1 Standardize the Process (for PA 00) BP 20.01 Establish Standard Processes
2-consider key factors	BP 00.03 Establish and maintain strategy
2.1b Strategic Objectives - describe strategic objectives and timetable for implementing them; - evaluate options to assess relative to key factors	BP 00.03 Establish and maintain strategy  BP 04.05 Analyze Alternative Solutions
<i>2.2 Strategy Deployment</i>	<i>PA 00 Integrated Enterprise Management; PA 18 Measurement and Analysis</i>
2.2a Action Plan Development and Deployment	
1-develop action plans	BP 00.04 Develop and deploy action plans
2-determine key human resource requirements	BP 00.04 Develop and deploy action plans

\* Note that criteria item descriptions in this table have been shortened and abbreviated.

\*\* See page 64

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
3-allocate resources	BP 00.04 Develop and deploy action plans
4-identify key performance measures/indicators for tracking	BP 00.04 Develop and deploy action plans
5-communicate and deploy strategic objectives, action plans, measures to achieve alignment	BP 00.04 Develop and deploy action plans BP 18.05 Communicate results
2.2b Performance Projection	
1-project key performance measures/indicators	BP 00.03 Establish and maintain strategy BP 18.04 Analyze measurement data
2-compare projected performance with competitors, key benchmarks, past performance, as appropriate	BP 18.04 Analyze measurement data
<b>3. Customer Focus**</b>	<b>PA 01 Needs; PA 10 Operation and Support; PA 02 Requirements</b>
<i>3.1 Customer and Market Knowledge</i>	<i>PA 01 Needs; PA 02 Requirements; PA 21 Process Improvement</i>
3.1a Customer and Market Knowledge	
1-determine customers and/or market segments	BP 01.01 Identify Customers and Stakeholders
2-listen and learn to determine key requirements	BP 01.02 Elicit Needs
3-determine key features and relative importance/value to customers	BP 01.04 Establish and Maintain a Statement of Need BP 02.03 Identify Key Requirements
4-keep listening and learning methods current with business needs and directions	GP 2.3 Plan the process; GP 2.14 Take corrective action; GP 3.3 Improve processes BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance
<i>3.2 Customer Satisfaction and Relationships</i>	<i>PA 01 Needs; PA 10 Operation and Support; PA 21 Process Improvement; PA 08 Evaluation; PA 20 Process Description</i>
3.2a Customer Relationships	
1-determine key methods for customer access	BP 01.05 Communicate with Customers BP 10.07 Provide Customer Support
2-determine and deploy customer contact requirements	BP 01.05 Communicate with Customers BP 10.07 Provide Customer Support
3-implement complaint management	BP 01.06 Determine Customer Satisfaction BP 10.07 Provide Customer Support
4-build relationships with customers	BP 01.06 Determine Customer Satisfaction BP 01.05 Communicate with Customers
5-keep relationships approaches current with business needs and directions	GP 2.3 Plan the process; GP 2.14 Take corrective action; GP 3.3 Improve processes BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
3.2b Customer Satisfaction Determination	
1-describe process for determining customer satisfaction and dissatisfaction	GP 2.2 Document the process; GP 3.1 Standardize the process (for PA 01) BP 20.01 Establish Standard Processes BP 08.01 Develop Evaluation Strategy
2-follow up with customers to assure feedback	BP 01.06 Determine Customer Satisfaction BP 10.07 Provide Customer Support
3-use information on customer satisfaction	BP 01.06 Determine Customer Satisfaction
4-keep approaches current with business needs and directions	GP 2.3 Plan the process; GP 2.14 Take corrective action; GP 3.3 Improve processes BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance
<b>4. Information and Analysis</b>	<b><i>PA 18 Measurement and Analysis; PA 00 Integrated Enterprise Management; PA 21 Process Improvement</i></b>
<i>4.1 Measurement of Organizational Performance</i>	<i>PA 18 Measurement and Analysis; PA 21 Process Improvement</i>
4.1a Measurement of Organizational Performance	
1-select measures/indicators	BP 18.01 Establish measures based on goals
2-keep measurement system current with business needs and directions	GP 2.3 Plan the process; GP 2.14 Take corrective action; GP 3.3 Improve processes (for PA 18) BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance
<i>4.2 Analysis of Organizational Performance</i>	<i>PA 18 Measurement and Analysis; PA 00 Integrated Enterprise Management</i>
4.2a Analysis of Organizational Performance	
1-analyze performance to support review and planning	BP 18.02 Collect relevant measurement data BP 18.03 Store data and results BP 18.04 Analyze measurement data BP 18.05 Communicate results
2-link organization-level analysis to operations	BP 18.01 Establish measures based on goals BP 18.02 Collect relevant measurement data BP 18.03 Store data and results BP 18.04 Analyze measurement data BP 18.05 Communicate results
3-analyze performance to support operations and align with action plans	BP 18.01 Establish measures based on goals BP 18.02 Collect relevant measurement data BP 18.03 Store data and results BP 18.04 Analyze measurement data BP 18.05 Communicate results BP 00.05. Review performance

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
<b>5. Human Resource Focus</b>	<b>PA 22 Training; PA 14 Integrated Teaming; PA 23 Innovation; PA 00 Integrated Enterprise Management; PA 11 Project Management; PA 05 Outsourcing; PA 01 Needs</b>
<b>5.1 Work Systems</b>	<b>PA 14 Integrated Teaming; PA 11 Project Management; PA 22 Training; PA 00 Integrated Enterprise Management; PA 05 Outsourcing</b>
<b>5.1a Work Systems and Job Design</b>	
1-design, organize, manage work and jobs to promote cooperation, collaboration, initiative, innovation, flexibility and keep current with business needs	BP 14.03 Establish and Maintain a Collaborative Workplace BP 11.07 Establish Commitment
2-encourage, motivate employees to develop and utilize potential	BP 22.07 Establish Learning Environment
3-manage employee performance to support high performance	(beyond scope of iCMM v2.0)
4-reinforce high performance through compensation, recognition, rewards/incentives	BP 00.02. Align to achieve the vision
5-ensure effective communication, cooperation, and knowledge/skill sharing	BP 22.07 Establish Learning Environment
6-identify characteristics and skills needed; recruit and hire; consider performance requirements, diversity, and fair work force practices	BP 22.01 Identify Training Needs BP 05.01 Identify Needed Products or Services BP 05.02 Identify Competent Suppliers BP 05.03 Prepare for the Solicitation or Tasking BP 05.04 Choose Supplier (for contract employees only – organizational recruitment beyond scope of iCMM v2.0)
<b>5.2 Employee Education, Training, and Development</b>	<b>PA 22 Training</b>
<b>5.2a Employee Education, Training and Development</b>	
1-balance short and longer-term organizational and employee education and training needs	BP 22.01 Identify Training Needs
2-design education and training to keep current with needs	BP 22.01 Identify Training Needs
3-seek and use input from employees and supervisors on education and training needs, expectations, and design	BP 22.01 Identify Training Needs BP 22.03 Establish Training Mechanism
4-deliver and evaluate education and training	BP 22.04 Train Individuals BP 22.06 Assess Training Effectiveness
5-address key developmental and training needs	BP 22.01 Identify Training Needs
6-address performance excellence in education and training	BP 22.01 Identify Training Needs
7-reinforce knowledge and skills on the job	BP 22.07 Establish Learning Environment
<b>5.3 Employee Well-Being and Satisfaction</b>	<b>PA 23 Innovation; PA 00 Integrated Enterprise Management; PA 01 Needs</b>
<b>5.3a Work Environment</b> - address and improve workplace health, safety, and ergonomic factors	BP 23.05 Manage Innovation
<b>5.3b Employee Support Climate</b>	
1-enhance work climate via services, benefits, and policies	BP 00.01. Establish and maintain strategic vision.

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
2-encourage and motivate employees to develop and utilize full potential in a diverse workforce	BP 22.07 Establish Learning Environment
5.3c Employee Satisfaction	
1-determine key factors that affect employee well-being, satisfaction, and motivation	BP 01.02 Elicit Needs
2-assess/determine employee well-being, satisfaction, and motivation	BP 01.06 Determine Customer Satisfaction:
3-relate findings to business results to identify improvement priorities	BP 00.05 Review Performance BP 00.06 Act on results of review
<b>6. Process Management</b>	<b>PA 20 Process Definition; PA 21 Process Improvement; PA 11 Project Management; PA 23 Innovation; Generic Practices; (Process Management applies to all PAs)</b>
<i>6.1 Product and Service Processes</i>	<i>All Life Cycle PAs</i>
6.1a Design Processes	<i>PA 20 Process Definition; PA 21 Process Improvement; PA 23 Innovation</i>
1-describe processes for product/service design and production/delivery	BP 20.01 Establish Standard Processes BP 21.01 Identify Process Improvement Goals
2-include changing requirements in product/service designs and production/delivery systems and processes	BP 21.01 Identify Process Improvement Goals BP 21.05 Implement Improvements BP 02.08 Analyze and resolve requirements change requests
3-incorporate new technology into products/services and systems and processes as appropriate	BP 23.01 Maintain New Technology Awareness BP 23.02 Select New Technologies BP 23.03 Prepare for Infusion BP 23.04 Infuse New Technologies BP 23.05 Manage Innovation
4-address quality, cycle time, transfer of learning, cost control, new design technology, productivity, and other efficiency/effectiveness factors in process design	GP 3.3 Improve Processes
5-ensure process design accommodates key operational performance requirements	BP 21.05 Implement Improvements BP 08.04 Evaluate Incremental Work Products
6-coordinate and test design and production/delivery processes to ensure capability for trouble-free and timely introduction of products/services	BP 23.03 Prepare for Infusion BP 23.04 Infuse New Technologies BP 23.05 Manage Innovation BP 08.01 Develop Evaluation Strategy
6.1b Production/Delivery Processes	<i>Applies to Life Cycle PAs: PA 01 Needs; PA 02 Requirements; PD03 Design; PA 06 Design Implementation; PA 07 Integration; PA 08 Evaluation; PA 09 Deployment, Transition, and Disposal; PA 10 Operation and Support</i>
1-describe key production/delivery processes and key performance requirements	BP 20.01 Establish Standard Processes GP 2.2 Document the process GP 3.1 Standardize the Process GP 4.1 Stabilize Process Performance
2-ensure operation of processes meets key performance requirements	BP 11.10 Monitor Project Performance GP 2.12 Measure process performance GP 2.14 Take corrective action GP 4.1 Stabilize Process Performance
3-use in-process measures/indicators to control and improve processes, including customer input as appropriate	GP 2.12 Measure process performance GP 2.14 Take corrective action BP 10.02 Monitor and evaluate capacity, service and

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items	FAA-iCMM v2.0 Process Areas and Practices
	performance BP 11.10 Monitor Project Performance GP 4.1 Stabilize Process Performance
4-improve processes to achieve better process performance and improvements to products/services, as appropriate, and share improvements, as appropriate	BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance GP 2.3 Plan the process GP 2.12 Measure process performance GP 2.14 Take corrective action GP 3.3 Improve processes GP 5.1 Pursue Process Optimization
6.2 Support Processes	<i>Applies to Support PAs: PA 04 Alternatives Analysis; PA 05 Outsourcing; PA 15 Quality Assurance and Management; PA 16 Configuration Management; PA 17 Information Management; PA 18 Measurement and Analysis; PA 20 Process Definition; PA 21 Process Improvement; PA 22 Training; PA 23 Innovation</i>
6.2a Support Processes	
1-describe key support processes	BP 20.01 Establish Standard Processes GP 2.2 Document the process GP 3.1 Standardize the Process GP 4.1 Stabilize Process Performance
2-determine key support process requirements, with input from customers as appropriate	GP 2.3 Plan the process GP 4.1 Stabilize Process Performance
3-design processes to meet requirements	BP 20.01 Establish Standard Processes GP 2.2 Document the process GP 3.1 Standardize the Process GP 4.1 Stabilize Process Performance
4-ensure operation meets requirements; use in-process measures and/or customer feedback	BP 15.01 Establish a Quality Management System BP 15.02 Monitor Process Compliance BP 15.05 Analyze Quality BP 11.10 Monitor Project Performance GP 2.12 Measure process performance GP 2.14 Take corrective action GP 4.1 Stabilize Process Performance
5-improve support processes to achieve better performance and keep current with organization needs and directions; share improvements, as appropriate	BP 15.04 Record and Report Results BP 15.06 Initiate Quality Improvement BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance GP 2.3 Plan the process GP 2.12 Measure process performance

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
	GP 2.14 Take corrective action GP 3.3 Improve processes GP 5.1 Pursue Process Optimization
<i>6.3 Supplier and Partnering Processes</i>	<i>PA 05 Outsourcing; PA 12 Supplier Agreement Management; PA 08 Evaluation</i>
<b>6.3a Supplier and Partnering Processes</b>	
1-describe products/services purchased	BP 05.01 Identify Needed Products or Services
2-incorporate performance requirements into supplier/partner process management;	BP 05.03 Prepare for the Solicitation or Tasking
3-ensure performance requirements met; provide feedback	BP 05.03 Prepare for the Solicitation or Tasking BP 12.02 Review and Monitor Agreement Performance BP 08.05 Verify End Products
4-minimize inspection, test, audit costs	BP 12.07 Administer Supplier Agreement
5-provide assistance and/or incentives to suppliers/partners to help them improve performance	BP 05.03 Prepare for the Solicitation or Tasking BP 12.05 Foster Cooperative and Collaborative Environment
6-improve (own) supplier/partner processes to keep current with organization needs and directions; share improvements as appropriate	BP 05.04 Choose Supplier BP 05.05 Communicate with Suppliers BP 12.04 Monitor Supplier's Plans, Processes, Activities and Products BP 12.05 Foster Cooperative and Collaborative Environment BP 21.01 Identify Process Improvement Goals BP 21.02 Establish Process Improvement Program BP 21.03 Appraise process BP 21.04 Establish an Action Plan BP 21.05 Implement Improvements BP 21.06 Confirm Improvements BP 21.07 Sustain and deploy Improvement Gains BP 21.08 Monitor Performance GP 2.3 Plan the process GP 2.12 Measure process performance GP 2.14 Take corrective action GP 3.3 Improve processes
<b>7. Business Results</b>	<b><i>PA 00 Integrated Enterprise Management; PA 18 Measurement and Analysis; PA 12 Supplier Agreement Management</i></b> <i>BP 18.03 Store data and results (all items)</i>
<i>7.1 Customer-Focused Results</i>	<i>PA 00 Integrated Enterprise Management</i>
<b>7.1a Customer-Focused Results</b>	
1-describe current levels and trends in key measures/indicators of customer satisfaction, dissatisfaction, satisfaction relative to competitors	BP 00.05 Review Performance (input from PA 01, and PA 18)
2-describe current levels and trends in key measures/indicators of customer loyalty, positive referral, customer-perceived value, relationship building as appropriate	BP 00.05 Review Performance (input from PA 01, and PA 18)
3-describe current levels and trends in key measures/indicators of product and service performance	BP 00.05 Review Performance (input from PA 01 and PA 10, and PA 18)

## Section 3: FAA-iCMM Version 2.0 Source Coverage Maps

<b>President's Quality Award/Malcolm Baldrige National Quality Award Categories/Items</b>	<b>FAA-iCMM v2.0 Process Areas and Practices</b>
<i>7.2 Financial Performance Results**</i>	<i>PA 00 Integrated Enterprise Management</i>
7.2a Financial Performance Results	
1-describe current levels and trends in key measures/indicators of financial performance	BP 00.05 Review Performance (input from PA 18)
2-describe current levels and trends in key measures/indicators of market performance and/or mission accomplishment including program impact, market share/position, business growth, new markets, as appropriate	BP 00.05 Review Performance (input from PA 18)
<i>7.3 Human Resource Results</i>	<i>PA 00 Integrated Enterprise Management</i>
7.3a Human Resource Results	
1-describe current levels and trends in key measures/indicators of employee well-being, satisfaction and dissatisfaction, and development	BP 00.05 Review Performance (input from PA 22 for development, and PA 18)
2-describe current levels and trends in key measures/indicators of work system performance and effectiveness	BP 00.05 Review Performance (input from PA 23 for work environment, and PA 18)
<i>7.4 Supplier and Partner Results</i>	<i>PA 00 Integrated Enterprise Management; PA 12 Supplier Agreement Management</i>
7.4a Supplier and Partner Results describe current levels and trends in key measures/indicators of supplier/partner performance, including improvements resulting from performance and performance management	BP 12.01 Use Planning Documents BP 12.02 Review and Monitor Agreement Performance BP 12.04 Monitor Supplier's Plans, Processes, Activities and Products BP 00.05 Review Performance (input from PA 12 and PA 18)
<i>7.5 Organizational Effectiveness Results</i>	<i>PA 00 Integrated Enterprise Management</i>
7.5a Organizational Effectiveness Results	
1-describe current levels and trends in key measures/indicators or key design, production, delivery, and support process performance; include productivity, cycle time, in-process and other appropriate measures of effectiveness and efficiency	BP 00.05 Review Performance  (input from all applicable PAs, and PA 18)
2-describe results for key measures/indicators or regulatory/legal compliance and citizenship	BP 00.05 Review Performance (input from PA 00, and PA 18)
3-describe results for key measures/indicators or accomplishment of organizational strategy **	BP 00.05 Review Performance (input from PA 00, and PA 18)

\*\*Note that in most cases President's Quality Award (PQA) criteria and Malcolm Baldrige National Quality Award (MBNQA) criteria are identical. The following are the exceptions:

Names of sections:

*1.2 Organization Responsibility and Citizenship (PQA)*

*1.2 Public Responsibility and Citizenship (MBNQA)*

*3. Customer Focus (PQA)*

*3. Customer and Market Focus (MBNQA)*

*7.2 Financial Performance Results (PQA)*

*7.2 Financial and Market Performance Results (MBNQA)*

One item is in PQA but does not appear in MBNQA: 7.5a-3

MP 5.1.3 Define an implementation strategy for the approved change	3.3 Improve Processes
MP 5.1.4 Implement the approved changes	3.3 Improve Processes
MP 5.1.5 Evaluate the effectiveness of process change	3.3 Improve Processes 5.1 Pursue Process Optimization
<i>PA 5.2 Continuous improvement attribute</i>	
MP 5.2.1 Define the process improvement goals for the process	5.1 Pursue Process Optimization
MP 5.2.2 Analyse the source of real and potential problems in the current process	3.3 Improve Processes 5.1 Pursue Process Optimization
MP 5.2.3 Implement changes to selected areas	3.3 Improve Processes
MP 5.2.4 Validate the effectiveness of process change	3.3 Improve Processes 5.1 Pursue Process Optimization

\*Process types are:

Basic – processes identical in intent to the processes in ISO/IEC 12207

Extended – processes that are expansions of ISO/IEC 12207 processes

New – processes that are outside the scope of ISO/IEC 12207

Component – processes (a group of one or more ISO/IEC 12207's activities from the same process)

Extended Component – processes that are one or more of ISO/IEC 12207's activities from the same process, with additional material. These would normally be Component processes of Extended processes.

### ISO/IEC 12207 to FAA iCMM V2.0

ISO/IEC 12207 Software life cycle Processes, Activities, and Tasks	FAA-iCMM v2.0 Process Areas and Practices
<b>5 Primary life cycle processes</b>	
<b>5.1 Acquisition process</b>	<b>PA 01 Needs; PA 02 Requirements; PA 05 Outsourcing; PA 12 Supplier Agreement Management; PA 08 Evaluation; PA 13 Risk Management</b>
<b>5.1.1 Initiation.</b>	<b>PA 01 Needs; PA 02 Requirements; PA 05 Outsourcing; PA 13 Risk Management</b>
5.1.1.1	BP 01.03 Analyze Needs. BP 01.04 Establish and Maintain a Statement of Need. BP 05.01 Identify Needed Products or Services.
5.1.1.2	BP 05.01 Identify Needed Products or Services. BP 02.01 Identify Functional and Performance Requirements. BP 02.02 Identify Nonfunctional Requirements and Constraints. BP 02.04 Derive requirements. BP 02.05 Identify external interface requirements. BP 02.06 Analyze requirements.
5.1.1.3	BP 02.07 Record and baseline requirements. BP 05.03 Prepare for the Solicitation or Tasking.
5.1.1.4	GP2.5 Assign Responsibility
5.1.1.5	GP2.8 Consistently use and manage the process
5.1.1.6	BP 05.01 Identify Needed Products or Services.
5.1.1.7	BP 05.02 Identify Competent Suppliers
5.1.1.8	BP 05.03 Prepare for the Solicitation or Tasking BP 13.02 Identify Risks. BP 13.04 Develop Risk Mitigation Plans.
5.1.1.9	BP 05.03 Prepare for the Solicitation or Tasking
<b>5.1.2 Request-for-proposal [-tender] preparation.</b>	<b>PA 05 Outsourcing; PA 02 Requirements;</b>
5.1.2.1	BP 05.03 Prepare for Solicitation or Tasking
5.1.2.2	BP 02.02 Identify Nonfunctional Requirements or Constraints. BP 05.03 Prepare for the Solicitation or Tasking
5.1.2.3	BP 02.02 Identify Nonfunctional Requirements or Constraints. BP 05.03 Prepare for the Solicitation or Tasking
5.1.2.4	BP 02.02 Identify Nonfunctional Requirements or Constraints. BP 05.03 Prepare for the Solicitation or Tasking
<b>5.1.3 Contract preparation and update.</b>	<b>PA 05 Outsourcing; PA 12 Supplier Agreement Management</b>
5.1.3.1	BP 05.03 Prepare for the Solicitation or Tasking.
5.1.3.2	BP 05.04 Choose Supplier.
5.1.3.3	BP 05.04 Choose Supplier.
5.1.3.4	BP 05.04 Choose Supplier.
5.1.3.5	BP 12.03 Maintain Supplier Agreement Integrity
<b>5.1.4 Supplier monitoring.</b>	<b>PA 12 Supplier Agreement Management</b>
5.1.4.1:	BP 12.02 Review and Monitor Agreement Performance
5.1.4.2:	BP 12.02 Review and Monitor Agreement Performance
<b>5.1.5 Acceptance and completion.</b>	<b>PA 08 Evaluation; PA 12 Supplier Agreement Management</b>
5.1.5.1	BP 12.08 Determine Product or Service Acceptance BP 08.02 Develop Evaluation Procedures. BP 08.03 Establish and Maintain Evaluation Environment
5.1.5.2	BP 08.05 Verify end-Products.
5.1.5.3	BP 12.08 Determine Product or Service Acceptance

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

**Table GP: FAA-iCMM v2.0 Sources of Capability Levels and Generic Practices**

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/PPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
<b>Capability Level 0</b>				
Capability Level 0: Incomplete One or more of the goals of the process area are not achieved. (No goal or generic practices at this level)	No level 0 – called “not implemented”	L0: Incomplete Not performed or partially performed. One or more of the specific goals of the process area are not satisfied.	Level 0: Initial Practices are not performed	Level 0: Incomplete process
<b>Capability Level 1</b>				
Capability Level 1: Performed L1 Goal: The process achieves the goals of the process area.	Capability Level 1 - Initial: Performed Informally (no goal)	L1: Performed L1 Generic Goal: Achieve Specific Goals	Level 1: Performed	Level 1: Performed process
1.1 Identify Work Scope		1.1 Identify Work Scope	(no generic practices at CL1)	MP 1.1-1 Identify input and output work products MP 1.1.2 Ensure that the scope of work is identified
1.2 Perform the Process	1.1 Perform the Process	1.2 Perform Base Practices		MP 1.1.3 Ensure that base practices are implemented
<b>Capability Level 2</b>				
Capability Level 2: Managed: Planned and Tracked L2 Goal: The process is institutionalized as a managed (planned and tracked) process.	Capability Level 2 - Repeatable: Planned and Tracked Level 2 Goal: The activities for the process are institutionalized to support a repeatable process.	L2: Managed L2 Generic Goal: The process is institutionalized as a managed process.	Level 2: Managed Activities are planned and tracked; performance verified; products conform; use measurement to track performance.	Level 2: Managed Process

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
2.1 Establish Organizational Policy	2.1 Establish Policy	2.1 Establish an Organizational Policy		
2.2 Document the Process	2.5 Document the Process	2.2 Plan the Process (includes subpractice to define and document the process description)	GP2.1 example activities: Document the approach to performing the activities of the FA; Reasonable processes are documented	MP 3.1.1 Identify the standard process
2.3 Plan the Process	2.6 Plan the Process	2.2 Plan the Process	GP 2.1 Follow recorded and approved plans and processes ... Example activity: Plan the performance of the process in accordance with the established program goals (such as profit, customer satisfaction, schedule delivery and quality goals)	MP 2.1.1 Identify the objectives MP 2.1.2 Plan the performance of the process MP 2.1.3 Plan and assign the responsibility and authority MP 3.2.2 Identify and document the process infrastructure requirements MP 4.1.1 Identify product and process goals and measures
2.4 Provide Adequate Resources	2.2 Allocate Adequate Resources	2.3 Provide Resources	(in 2.1 example activities) Allocate adequate resources including people, training, tools, budget, and time for performing the FA.	MP 3.2.3 Provide, allocate and use the resources MP 3.2.4 Provide, allocate and use an adequate process infrastructure
2.5 Assign Responsibility	2.3 Assign Responsibility	2.4 Assign Responsibility	(in 2.1 example activities) Assign responsibilities for developing the work products and providing the services of the FA	MP 2.1.3 Plan and assign the responsibility and authority MP 3.2.1 Identify and document the roles, responsibilities and competencies
2.6 Ensure Skill and Knowledge	2.4 Ensure Training	2.5 Train people		MP 3.2.1 Identify and document the roles, responsibilities and competencies

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
2.7 Establish Work Product Requirements	(new GP)	2.2 Plan the process		MP 2.2-1 Identify the requirements MP 2.2-3 Identify and define
2.8 Consistently Use and Manage the Process	2.7 Use a Repeatable Process		2.1 Example activity “Use the documented plans, standards, or procedures in implementing the process for the program”	2.1 Performance management attribute: result 3 ? MP 3.2.3 Provide, allocate and use the resources MP 3.2.4 Provide, allocate and use an adequate process infrastructure
2.9 Manage Work Products	2.8 Manage Configurations	2.6 Manage Configurations:		MP 2.2.2 Manage
2.10 Objectively Assess Process Compliance.	2.9 Assess Process Compliance	2.9 Objectively Evaluate Adherence	GP 2.2 Verify compliance with approved plans and processes, and take appropriate action when performance deviates from plan or when processes are not followed.	
2.11 Objectively Verify Work Products	2.10 Verify Work Products 3.3 Perform Reviews with Peers	2.9 Objectively Evaluate Adherence		MP 2.2.4 Manage the quality of work products
2.12 Measure Performance	2.11 Measure Process	2.8 Monitor and Control the Process		MP 2.1.4 Manage the execution of the activities MP 4.1.2 Collect the specified product and process measures MP 4.2.1 Identify suitable measurement techniques
2.13 Review Performance with Higher-level Management	2.12 Review Status	2.10 Review Status with Higher-level Management		

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
2.14 Take Corrective Action	2.13 Take Corrective Action	2.8 Monitor and Control the Process 2.10 Review Status with Higher-level Management	GP 2.2 Verify compliance with approved plans and processes, and take appropriate action when performance deviates from plan or when processes are not followed.	MP 2.1.4 Manage the execution of the activities
2.15 Coordinate with Stakeholders	2.14 Coordinate Within the Project 3.4 Coordinate with Affected Groups	2.7 Identify and Involve Relevant Stakeholders.		
<b>Capability Level 3</b>				
Capability Level 3: Defined Level 3 Goal: The process is institutionalized as a defined process.	Capability Level 3: Defined; Well Defined Level 3 Goal: The activities of the process are institutionalized to support a defined process.	L3: Defined L3 Generic Goal: The process is institutionalized as a defined process.	Level 3: Defined Activities are performed according to a well-defined process using approved, tailored versions of standard, documented processes.	Level 3: Established process
3.1 Standardize the Process	3.1 Standardize the Process	3.1 Establish a Defined Process (includes standardization of the process)	GP 3.1 Standardize and record a well-defined FA process for the organization that is designed to meet specific business goals, and is based on experiences captured from previous programs.	MP 3.1-1 Identify the standard process

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/PPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
3.2 Establish and Use a Defined Process	3.2 Use Defined Process	3.1 Establish a Defined Process	GP 3.2 Tailor the organization's standard process using standard guidelines to meet specific program or organizational needs. GP 3.3 Implement and improve the FA activities (i.e., tailored process) per established and approved formal procedures.	MP 3.1.2 Implement and/or tailor the standard process [MP 4.1.1 Identify product and process goals and measures (Note: also required at iCMM CL2)]
3.3 Improve Processes	5.1 Perform Continual Process Improvement on the Organizational Standard and Tailored Processes	3.2 Collect Improvement Information	GP 3.3 Implement and improve the FA activities (i.e., tailored process) per established and approved formal procedures. GP 3.4 Improve the organization's standard process using information from work product reviews and process compliance reviews.	MP 3.1.3 Gather process performance data MP 3.1.4 Establish and refine the understanding of the process behavior MP 3.1.5 Refine [MP 4.1.2 Collect the specified product and process measures (Note: also required at iCMM CL2)] MP 4.1.3 Analyze trends in the performance of the process [MP 4.2.1 Identify suitable measurement techniques (Note: also required at iCMM CL2)] MP 5.1.1 Identify changes to the standard process definition MP 5.1.2 Assess the impact of all proposed changes

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
3.3 Improve processes (continued)	5.2 Implement Improved Processes		GP 5.3 Improve the organization's standard process based on data and metrics collected from a continuing program of process compliance reviews and work product reviews. GP 5.4 Perform causal analysis of process and work product defects and eliminate causes of variation in quality, cost, and cycle time by changing the standard process.	MP 5.1.3 Define an implementation strategy for the approved change MP 5.1.4 Implement the approved changes MP 5.1.5 Evaluate the effectiveness of process change MP 5.2.2 Analyze the source of real and potential problems in the current process MP 5.2.3 Implement changes to selected areas of the tailored process according to the implementation strategy. MP 5.2.4 Validate the effectiveness of process change
<b>Capability Level 4</b>				
Capability Level 4: Quantitatively Managed Level 4 Goal: The process is institutionalized as a quantitatively managed process.	Capability Level 4: Managed; Quantitatively Controlled Level 4 Goal: The activities of the processes are institutionalized to support quantitative management of defined processes.	L4: Quantitatively Managed L4 Generic Goal: The process is institutionalized as a quantitatively managed process.	Level 4: Measured Metrics are defined for the organization and programs, and mechanisms are in place to track program and organizational performance quantitatively, and to take corrective actions on the basis of those measures.	Level 4: Predictable Process

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
4.1 Stabilize Process Performance	4.1 Establish Quality Objectives for Product and Process 4.2 Select Processes for Measurement. 4.3 Select Measures for the Process 4.4 Determine Quantitative Process Capability 4.5 Use Quantitative Process Capability	4.1 Establish Quality Objectives 4.2 Stabilize Subprocess Performance	GP 5.1 Identify FA activities for which it is appropriate, and inappropriate, to quantify process repeatability. GP 5.2 Establish quantitative goals for improving the effectiveness of the standard process. GP 4.1 Collect and analyze metrics to determine the performance of the tailored FA activities. GP 4.2 Take appropriate action to align tailored FA performance and expectations.	[MP 4.1.1 Identify product and process goals and measures (Note: also required at iCMM CL2 and CL3)] MP 4.1.4 Measure the process capability [MP 4.2.1 Identify suitable measurement techniques (Note: also required at iCMM CL2 and CL3)] MP 4.2.2 Collect measures and identify process control parameters MP 4.2.3 Control the process performance using the analysis measures [MP 4.1.2 Collect the specified product and process measures (Note: also required at iCMM) CL2 and CL3]
<b>Capability Level 5</b>				
Capability Level 5: Optimizing Level 5 Goal: The process is institutionalized as an optimizing process	Capability Level 5: Optimizing; Continuously improving Level 5 Goal: Continually improving processes are deployed throughout the organization.	L5: Optimizing L5 Generic Goal: The process is institutionalized as an optimizing process.	Level 5: Optimizing The organization establishes quantitative performance goals (targets) for process effectiveness and efficiency based on its business goals. The organization is able to continuously improve its process by gathering quantitative data from performing the processes and from piloting innovative ideas and technologies.	Level 5: Optimizing Process

## Section 4: FAA-iCMM Version 2.0 Practice-Level Maps

<i>FAA-iCMM v2.0 Capability Levels and Generic Practices</i>	<i>FAA-iCMM v1.0 Capability Levels and Generic Practices</i>	<i>CMMI-SE/SW/IPPD (continuous) Capability Levels and Generic Practices</i>	<i>EIA/IS 731 Capability Levels and Generic Practices</i>	<i>ISO/IEC TR 15504 Capability Levels, Process Attributes, and Management Practices</i>
5.1 Pursue Process Optimization	(CL5 GPs moved to CL3)	5.1 Ensure Continuous Process Improvement 5.2 Correct Common Cause of Problems	GP 5.3 Improve the organization's standard process based on data and metrics collected from a continuing program of process compliance reviews and work product reviews. GP 5.4 Perform causal analysis of process and work product defects and eliminate causes of variation in quality, cost, and cycle time by changing the standard process.	MP 5.2.1 Define the process improvement goals for the process [MP 5.2.2 Analyze the source of real and potential problems in the current process (Note: also required at iCMM CL3)] [MP 4.2.3 Control the process performance using the analysis measures (Note: also required at iCMM CL4)] [MP 5.1.5 Evaluate the effectiveness of process change (Note: also required at iCMM CL3)] [MP 5.2.4 Validate the effectiveness of process change (Note: also required at iCMM CL3)]

<b>Goals</b>				
1. The evaluation approach, requirements, methods, and environment are established to provide an objective basis for determining whether the products and services meet requirements and can be accepted.				
2. Evaluations are performed as planned.				
3. Analyses are conducted on results of evaluations to support acceptance or corrective actions.

---

**Table PA 01: FAA-iCMM v1.0 Sources of Needs Practices**

<i>PA 01 Needs Base Practices</i>	<i>SE-CMM Understand Customer Needs and Expectations: Base Practices</i>
1. Elicit Needs	6.1 Elicit the customer's needs, expectations, and measures of effectiveness.
2. Analyze Needs	6.2 Analyze the customer's needs and expectations to develop a preliminary operational concept of the system.
3. Develop System Requirements	6.3 Develop a statement of system requirements.
4. Obtain Customer Agreement	6.4 Obtain customer agreement that system requirements satisfy their needs and expectations.
5. Inform Customer	6.5 Inform the customer on a regular basis about the status and disposition of needs, expectations, and measures of effectiveness.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 02: FAA-iCMM v1.0 Sources of Requirements Practices**

<i><b>PA 02 Requirements base practices</b></i>	<i><b>SE-CMM Derive and Allocate Requirements: Base Practices (* Evolve System Architecture)</b></i>	<i><b>SA-CMM Requirements Development and Management: Activities Performed (** Evaluation)</b></i>	<i><b>SW-CMM Requirements Management: Activities Performed</b></i>	<i><b>SW-CMM Software Product Engineering: Selected Activities Performed</b></i>
1. Develop operational concept	2.1 Develop a detailed operational concept of interaction of system, user, and environment, that satisfies the operational need.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		
2. Identify key requirements	2.2 Identify key requirements that have a strong influence on cost, schedule, functionality, risk, or performance.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		
3. Derive and partition requirements	2.4 Derive, from the system and other requirements, requirements that may be logically inferred and implied as essential to system effectiveness. 2.3 Partition functions into groups based on established criteria to facilitate & focus requirements analysis. * 3.8 Identify appropriate derived requirements that address the effectiveness and cost of life cycle phases following development, such as production and operation.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		
4. Identify interface requirements	2.5 Identify the requirements associated with external interfaces to the system and interfaces between functional partitions or objects.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 02 Requirements base practices</i>	<i>SE-CMM Derive and Allocate Requirements: Base Practices (* Evolve System Architecture)</i>	<i>SA-CMM Requirements Development and Management: Activities Performed (** Evaluation)</i>	<i>SW-CMM Requirements Management: Activities Performed</i>	<i>SW-CMM Software Product Engineering: Selected Activities Performed</i>
5. Allocate requirements	2.6 Allocate requirements to functional partitions, objects, people, or support elements to support synthesis of solutions.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		
6. Analyze requirements	2.7 Analyze requirements to ensure they are verifiable by the methods available to the development effort.	** <b>EV-Ac2</b> The project's evaluation requirements are developed in conjunction with the development of the system or software technical requirements.		2. The software requirements are developed, maintained, documented, and verified by systematically analyzing the allocated requirements according to the project's defined software process.
7. Capture and baseline requirements	2.9 Capture system and other requirements, derived requirements, derivation rationale, allocations, traceability, and requirements status.	2. The project team develops and baselines software-related contractual requirements and places them under change control early in the project, but not later than release of solicitation package.		
8. Analyze and incorporate requirements changes		3. The project team appraises system requirements change requests for their impact on software being acquired. 4. The project team appraises all changes to software-related contractual requirements for their impact on performance, architecture, supportability, and system resource utilization and contract schedule and cost.	3. Changes to the allocated requirements are reviewed and incorporated into the software product.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 02 Requirements base practices</i>	<i>SE-CMM Derive and Allocate Requirements: Base Practices (* Evolve System Architecture)</i>	<i>SA-CMM Requirements Development and Management: Activities Performed (** Evaluation)</i>	<i>SW-CMM Requirements Management: Activities Performed</i>	<i>SW-CMM Software Product Engineering: Selected Activities Performed</i>
9. Maintain consistency and traceability	2.8 Maintain requirements traceability to ensure that lower level (derived) requirements are necessary and sufficient to meet the objectives of higher level requirements.  * 3.6 Maintain requirement traceability for the architecture's requirements to ensure that lower level (derived) requirements are necessary and sufficient to meet the needs of higher level requirements or design.	5. Bi-directional traceability between the software-related contractual requirements and the contractor's software work products and services is maintained throughout the effort.	2. The software engineering group uses the allocated requirements as the basis for software plans, work products, and activities.	10. Consistency is maintained across software work products, including the software plans, process descriptions, allocated requirements, software requirements, software design, code, test plans, and test procedures.
<i>Covered by generic practices</i>		1. The project team performs its activities in accordance with its documented requirements development and management plans.	1. The software engineering group reviews the allocated requirements before they are incorporated into the software project.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 03: FAA-iCMM v1.0 Sources of Architecture Practices**

<i>PA 03 Architecture Base Practices</i>	<i>SE-CMM Derive and Allocate Requirements: Base Practices</i>	<i>SW-CMM Software Product Engineering: Selected Activities Performed</i>
1. Derive system architecture requirements	3.1 Derive the requirements for the system architecture.	
2. Identify key design issues	3.2 Identify the key design issues that must be resolved to support successful development of the system.	3. The software design is developed, maintained, documented, and verified, according to project's defined software process, to accommodate the software requirements and to form the framework for coding.
3. Develop architectural structure	3.3 Generate alternative(s) and constraints for the architecture and select a solution in accordance with the Alternatives process area (PA 04).	3. The software design is developed, maintained, documented, and verified, according to project's defined software process, to accommodate the software requirements and to form the framework for coding.
4. Develop architecture interface requirements	3.4 Develop the interface requirements for the selected architecture components.	3. The software design is developed, maintained, documented, and verified, according to project's defined software process, to accommodate the software requirements and to form the framework for coding.
5. Allocate architecture requirements	3.5 Allocate the system and derived requirements to the chosen architecture components and interfaces.	3. The software design is developed, maintained, documented, and verified, according to project's defined software process, to accommodate the software requirements and to form the framework for coding.
6. Capture results and rationale	3.7 Describe the system architecture by capturing the design results and rationale.	3. The software design is developed, maintained, documented, and verified, according to project's defined software process, to accommodate the software requirements and to form the framework for coding. 8. The documentation that will be used to operate and maintain the software is developed and maintained according to the project's defined software process.
<i>To other PAs</i>	3.6 Maintain requirement traceability for the architecture's requirements to ensure that lower level (derived) requirements are necessary and sufficient to meet the needs of higher level requirements or design. ( PA 02)  3.8 Identify appropriate derived requirements that address the effectiveness and cost of life cycle phases following development, such as production and operation. (PA 02)	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

---

**Table PA 04: FAA-iCMM v1.0 Sources of Alternative Practices**

<i>PA 04 Alternatives base practices</i>	<i>SE-CMM Analyze Candidate Solutions: Base Practices</i>
1. Establish Evaluation Criteria	1.1 Establish evaluation criteria based on the identified problem and its defined constraints.
2. Define Analysis Approach	1.2 Define the general approach for the analysis, based on the established evaluation criteria.
3. Identify Alternatives	1.3 Identify alternatives for evaluation in addition to those provided with the problem statement.
4. Analyze Alternatives	1.4 Analyze the competing candidate solutions against the established evaluation criteria.
5. Select Solution	1.5 Select the solution that satisfies the established evaluation criteria.
6. Capture the Disposition of Each Alternative	1.6 Capture the disposition of each alternative under consideration and the rationale for the disposition.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 05: FAA-iCMM v1.0 Sources of Outsourcing Practices**

<i>PA 05 Outsourcing base practices</i>	<i>SE-CMM Coordinate with Suppliers: Base Practices</i>	<i>SA-CMM Solicitation: Activities Performed (*Evaluation)</i>	<i>SW-CMM Software Subcontract Management: Activities Performed</i>
1. Identify System or Process Components	18.1. Identify needed systems components or services that must be provided by other/outside organizations.		1. The work to be subcontracted is defined and planned according to a documented procedure. (define the work)
2. Identify competent suppliers	18.2. Identify suppliers that have shown expertise in the identified areas.		2. The software subcontractor is selected, based on an evaluation of the subcontractor's ability to perform the work, based on a documented procedure.
3. Prepare for the solicitation		3. Cost and schedule estimates for the software products and services being sought are prepared. 4. Software cost and schedule estimates are independently reviewed for comprehensiveness and realism. * <b>EV.Ac3.</b> The evaluation requirements are incorporated into the solicitation package and resulting contract.	
4. Choose supplier	18.3. Choose suppliers in accordance with the Analyze Candidate Solutions process areas.		2. The software subcontractor is selected, based on an evaluation of the subcontract bidders' ability to perform the work, according to a documented procedure.
5. Communicate with Suppliers	18.4. Provide to suppliers the needs, expectations, and measures of effectiveness held by the organization for the system components or services that are to be delivered. 18.5. Maintain timely two-way communication with suppliers.	5. The project team takes action to ensure the mutual understanding of software requirements and plans prior to contract award.	
<i>Covered by generic practices</i>		1. The project team performs its activities in accordance with its documented solicitation	1. The work to be subcontracted is defined and planned according to a documented procedure. 6. Changes to the software subcontractor's

		plans. 2. The project team performs its activities in accordance with its documented proposal evaluation plans.	statement of work, subcontract terms and conditions, and other commitments are resolved according to a documented procedure.
<i>To other PAs</i>			<p>3. The contractual agreement between the prime contractor and the software contractor is used as the basis for managing the subcontract. (PA 12)</p> <p>4. A documented subcontractor's software development plan is reviewed and approved by prime contractor. (PA 12)</p> <p>5. A documented and approved subcontractor's software development plan is used for tracking the software activities and communicating status. (PA 12)</p> <p>7. The prime contractor's management conducts periodic status/coordination reviews with the software subcontractor's management. (PA 12)</p> <p>8. Periodic technical reviews and interchanges are held with the software subcontractor. (PA 12)</p> <p>9. Formal reviews to address the subcontractor's software engineering accomplishments and results are conducted at selected milestones according to a documented procedure. (PA 12)</p> <p>10. The prime contractor's software quality assurance group monitors the subcontractor's software quality assurance activities according to a documented procedure. (PA 12, PA 15)</p> <p>11. The prime contractor's software configuration management group monitors the subcontractor's activities for software configuration management according to a documented procedure. (PA 12)</p> <p>12. The prime contractor conducts acceptance testing as part of the delivery of the subcontractor's software products according to a documented procedure. (PA 08)</p> <p>13. The software subcontractor's performance is evaluated on a periodic basis, and the evaluation is reviewed with the subcontractor. (PA 12)</p>

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 06: FAA-iCMM v1.0 Sources of Software Development and Maintenance Practices**

<i>PA 06 Software development &amp; Maintenance Base Practices</i>	<i>SW-CMM Software Product Engineering: Activities Performed</i>
1. Integrate methods and tools	1. Appropriate software engineering methods and tools are integrated into the project's defined software process.
2. Analyze allocated requirements	2. The software requirements are developed, maintained, documented, and verified by systematically analyzing the allocated requirements according to the project's defined software process.
3. Design software	3. The software design is developed, maintained, documented, and verified, according to the project's defined software process, to accommodate the software requirements and to form the framework for coding.
4. Implement software	4. The software code is developed, maintained, documented, and verified, according to the project's defined software process, to implement the software requirements and software design.
5. Test software	5. Software testing is performed according to the project's defined software process.
6. Perform integration testing	6. Integration testing of the software is planned and performed according to the project's defined software process.
7. Develop documentation	8. The documentation that will be used to operate and maintain the software is developed and maintained according to the project's defined software process.
8. Maintain consistency across software work products	10. Consistency is maintained across software work products, including the software plans, process descriptions, allocated requirements, software requirements, software design, code, test plans, and test procedures.
<i>To other PAs</i>	7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements. (to PA 08) 9. Data on defects identified in peer reviews and testing are collected and analyzed according to the project's defined software process. (to PA 17)

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 07: FAA-iCMM v1.0 Sources of Integration Practices**

<i>PA 07 Integration base practices</i>	<i>SE-CMM Integrate System: Base Practices</i>	<i>SW-CMM Software Product Engineering: Activities Performed</i>
1. Define Interfaces	5.1. Develop detailed specifications of the interfaces implied by the system architecture.	
2. Verify Receipt of System Elements	5.3. Verify the receipt of each system element required to assemble the system in accordance with the physical architecture.	
3. Verify System Element Correctness	5.4. Verify the implemented design features of developed or purchased system elements against their requirements.	6. Integration testing of the software is planned and performed according to the project's defined software process. 7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements.
4. Verify System Element Interfaces	5.5. Verify that the system element interfaces comply with the interface specifications prior to assembly.	6. Integration testing of the software is planned and performed according to the project's defined software process. 7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements.
5. Assemble Aggregates of System Elements	5.6. Assemble aggregates of system elements in accordance with the established integration strategy.	
6. Test System Level Integration	5.7. Check the integrated system interfaces in accordance with the established integration strategy.	6. Integration testing of the software is planned and performed according to the project's defined software process. 7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements.
7. Develop Integration Strategy	5.8. Develop an integration strategy and supporting documentation that identify the optimal sequence for receipt, assembly, and activation of the various components that make up the system.	6. Integration testing of the software is planned and performed according to the project's defined software process.
<i>To other PAs</i>	5.2 Coordinate Interfaces. (PA 14)	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 08: FAA-iCMM v1.0 Sources of System Test and Evaluation Practices**

<i>PA 08 System Test and Evaluation base practices</i>	<i>SE-CMM Verification and Validation: Base Practices</i>	<i>SA-CMM Evaluation: (*Contract Performance Management) Activities Performed</i>	<i>SW-CMM Software Product Engineering: (**Software Subcontract Management) Activities Performed</i>
1. Develop Evaluation Strategy and Requirements	7.1. Establish plans for verification and validation that identify the overall requirements, objectives, resources, facilities, special equipment, and schedule applicable to the system development.	2. The project's evaluation requirements are developed in conjunction with the development of the system or software technical requirements.	
2. Define Evaluation Procedures	7.2. Define the methods, process, reviews, inspections, and tests by which incremental products are verified against established criteria or requirements that were established in a previous phase. 7.3. Define the methods, processes, and evaluation criteria by which the system or product is verified against the system or product requirements. 7.4. Define the methods, process, and evaluation criteria by which the system or product will be validated against the customer's needs and expectations.		7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements.
3. Incorporate Evaluation Requirements into the Solicitation and Contract		3. The evaluation requirements are incorporated into the solicitation package and resulting contract.	
4. Monitor Contractor Performance		4. The project team assesses contractor's performance for compliance with evaluation requirements.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 08 System Test and Evaluation base practices</i>	<i>SE-CMM Verification and Validation: Base Practices</i>	<i>SA-CMM Evaluation: (*Contract Performance Management) Activities Performed</i>	<i>SW-CMM Software Product Engineering: (**Software Subcontract Management) Activities Performed</i>
5. Perform Planned Evaluations	7.5. Perform the verification and validation activities that are specified by the verification and validation plans, procedures, and capture results.	5. Planned evaluations are performed on the acquired S/W products and services prior to acceptance for operational use. *6. The end user periodically participates in the evaluation of evolving software products and services to determine the satisfaction of operational requirements.	7. System and acceptance testing of the software are planned and performed to demonstrate that the software satisfies its requirements. **12. The prime contractor conducts acceptance testing as part of the delivery of the subcontractors software products according to a documented procedure.
6. Analyze Evaluation Results	7.6. Compare the collected test, inspection, or review results with established evaluation criteria to assess the degree of success.	4. The project team assesses contractor's performance for compliance with evaluation requirements. 6. Results of the evaluations are analyzed and compared to the contract's requirements to establish an objective basis to support the decision to accept the products and services or to take further action.	
<i>Covered by generic practices</i>		1. The project team performs its activities in accordance with its documented evaluation plans.	5. Software testing is performed according to the project's defined software process. 6. Integration testing of SW is planned and performed according to the project's defined software process.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 09: FAA-iCMM v1.0 Sources of Transition Practices**

<i>PA 09 Transition base practices</i>	<i>SA-CMM Transition to Support: Abilities to Perform</i>	<i>SA-CMM Transition to Support: Activities Performed</i>
1. Conduct inventory	4. The software support organization, prior to transition, has a complete inventory of all software related items that are to be transitioned.	
2. Develop and follow transition to support strategy		1. The project team performs its activities in accordance with its documented transition to support plans.
3. Demonstrate support capability		2. Responsibility for the software products is transferred only after the software support organization demonstrates its capability to modify and support the software products.
4. Oversee the configuration management of the system		3. The project team oversees the configuration control of the software products throughout the transition.
5. Oversee the requirements management of the system		
6. Transfer and tailor developer's processes to support organization

<i>PA 11 Project Management base practices</i>	<i>SE-CMM Monitor and Control Technical Effort: Base Practices</i>	<i>SE-CMM Plan Technical Effort: Base Practices</i>	<i>SA-CMM Software Acquisition Planning: Activities Performed</i>	<i>SA-CMM Project Management: Activities Performed</i>
1. Identify the Activities		12.5 Identify technical activities for the entire life cycle of the project.	4. Life cycle support of the software is included in software acquisition planning documentation.	
2. Identify the Life Cycle Approach		12.4 Determine the technical process to be used on the project.	2. The software acquisition strategy for the project is developed and documented.	
3. Establish Estimates		12.2 Develop estimates for the factors that affect the magnitude and technical feasibility of the project. 12.3 Develop cost estimates for all technical resources required by the project.	5. Life cycle cost and schedule estimates for the software products and services being acquired are prepared and independently reviewed.	
4. Develop Schedules for the Project		12.7 Develop technical schedules for the entire project life cycle.		
5. Establish and Maintain Plans		12.1 Identify resources that are critical to the technical success of the project. 12.6 Define project processes to support effective interaction with customer(s) and supplier(s). 12.8 Establish technical parameters with thresholds for the project and the system. 12.9 Use the information gathered in planning activities to develop technical	2. The software acquisition strategy for the project is developed and documented. 3. The software acquisition planning is documented and the planning documentation is maintained over the life of the project. 4. Life cycle	2. The organization of the project provides for the management of all project functions.  3. The software acquisition management activities of the project team are directed to accomplish the project directives.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 11 Project Management base practices</i>	<i>SE-CMM Monitor and Control Technical Effort: Base Practices</i>	<i>SE-CMM Plan Technical Effort: Base Practices</i>	<i>SA-CMM Software Acquisition Planning: Activities Performed</i>	<i>SA-CMM Project Management: Activities Performed</i>
		management plans that will serve as the basis for tracking the salient aspects of the project and the systems engineering effort.	support of the software is included in software acquisition planning documentation.	
6. Establish Commitment		12.10 Review the technical management plans with all affected groups and individuals, and obtain group commitment.	1. Planning personnel are involved in system acquisition planning.	
7. Monitor the Project according to Established Plans	11.1 Direct technical effort in accordance with technical management plans. 11.5 Review performance against the technical management plans.			1. The project team performs its activities in accordance with its documented software acquisition management plans. 3. The software acquisition management activities of the project team are directed to accomplish the project directives. 4. The software acquisition management activities of the project team are controlled.
8. Track Project to Established Plans	11.2 Track actual use of resources against technical management plans. 11.3 Track performance against the established technical parameters.			6. The project team tracks project status, execution, funding, and expenditures and takes action.
9. Review Performance against Established Plans	11.4 Review performance against the technical management plans.  11.5 Analyze Issues resulting from the tracking and review of technical parameters to determine corrective actions.			

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<b>PA 12 Contract Management base practices</b>	<b>SA - CMM Contract Tracking and Oversight (CTO) and Contract Performance Management (CPM)  <i>Activities Performed</i></b>	<b>SE-CMM Coordinate With Suppliers (PA18) (Mostly covered in PA05, Outsourcing) <i>Base Practices</i></b>	<b>SW-CMM Software Subcontract Management (SSM)  <i>Activities Performed</i></b>
1. Review and use planning documents	CTO.Ac2. The project team reviews required contractor software planning documents which, when satisfactory, are used to oversee the contractor's software engineering effort.		3. The contractual agreement between the prime contractor and the software contractor is used as the basis for managing the subcontract. 4. A documented subcontractor's software development plan is reviewed and approved by prime contractor. 5. A documented and approved subcontractor's software development plan is used for tracking the software activities and communicating status.
2 Conduct Periodic reviews	CTO.Ac3. The project team conducts periodic reviews and interchanges with the contractor. CTO.Ac4. The project team reviews and tracks the development of the software engineering environment required to provide life cycle support for the acquired software.		7. The prime contractor's management conducts periodic status/coordination reviews with the software subcontractor's management. 8. Periodic technical reviews and interchanges are held with the software subcontractor. 9. Formal reviews to address the subcontractor's software engineering accomplishments and results are conducted at selected milestones according to a documented procedure. 13. The software subcontractor's performance is evaluated on a periodic basis, and the evaluation is reviewed with the subcontractor.
3. Maintain contract integrity	CTO.Ac6. The project team maintains the integrity of the contract throughout the contract performance period.		
4. Monitor contractor's support processes			10. The prime contractor's software quality assurance group monitors the subcontractor's software quality assurance activities according to a documented procedure. 11. The prime contractor's software configuration management group monitors the subcontractor's activities for software configuration management according to a documented procedure.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<b>PA 12 Contract Management base practices</b>	<b>SA-CMM Contract Tracking and Oversight (CTO) and Contract Performance Management (CPM)  <i>Activities Performed</i></b>	<b>SE-CMM Coordinate With Suppliers (PA18) (Mostly covered in PA05, Outsourcing) <i>Base Practices</i></b>	<b>SW-CMM Software Subcontract Management (SSM)  <i>Activities Performed</i></b>
5. Foster cooperative environment	CPM.Ac7. Contract performance mgmt activities are performed to foster a cooperative environment between the project team and the contractor.	PA18.5 Maintain timely two-way communication with suppliers.	
<i>Covered by generic practices</i>	CTO.Ac1. The project team performs its activities in accordance with its documented contract tracking and oversight plans. CTO.Ac5. Any problems or issues found by the project team during tracking and oversight are recorded in the appropriate corrective action system and tracked to closure. CPM.Ac1. The project team performs its activities in accordance with its documented contract performance management plans. CPM.Ac2 The contractor's software engineering process is appraised according to the project's defined software acquisition process. (Note: "appraised" in SA-CMM indicates review and comparison against requirements or standards) CPM.Ac3. Results of the contractor's engineering activities are appraised according to the projects defined software acquisition process. CPM.Ac4. Measurements from appraisals are used to evaluate the contractor's performance, and trends are analyzed.		1. The work to be subcontracted is defined and planned according to a documented procedure. 6. Changes to the software subcontractor's statement of work, subcontract terms and conditions, and other commitments are resolved according to a documented procedure.
<i>To other PAs</i>	CPM.Ac5. As understanding of the software engineering process, products, and services improves, the project team may propose changes to the software products or services, process descriptions, plans, and activities. (PA21) CPM.Ac6. The end user periodically participates in the evaluation of evolving sw products and services to determine the satisfaction of operational requirements. (GP3.5 applied to PA08 and PA07)		2. The software subcontractor is selected, based on an evaluation of the subcontract bidders' ability to perform the work, according to a documented procedure. (in Outsourcing, PA05) 12. The prime contractor conducts acceptance testing as part of the delivery of the subcontractor's software products according to a documented procedure. (GP2.4 for PA08)

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 13: FAA-iCMM v1.0 Sources of Risk Management Practices**

<i>PA 13 Risk Management base practices</i>	<i>SE- CMM Manage Risk: Base Practices</i>	<i>SW-CMM Integrated Software Management: Activities performed</i>	<i>SA-CMM Acquisition Risk Management: Activities Performed</i>	<i>SA -CMM Project Performance Management: Activities Performed</i>	<i>SW- CMM Software Project Planning &amp; Tracking &amp; Oversight Activities Performed</i>
1. Develop Risk Management Approach	1. Develop a plan for risk-management activities that is the basis for identifying, assessing, mitigating, and monitoring risks for the life of the project.		1. Software acquisition risk management activities are integrated into software acquisition planning. 2. The Software Acquisition Risk Management Plan is developed in accordance with the project's defined software acquisition process. 4. Risk Management is conducted as an integral part of the solicitation, project performance management, and contract performance management processes.		
2. Identify Risks	2. Identify project risks by examining project objectives with respect to the alternatives and constraints, and identifying what can go wrong.	10. The project's software risks are identified, assessed, documented and managed according to a documented procedure.		10. The project team identifies and analyzes risks and identifies specific risk handling actions for those risks.	13. The software risks associated with the cost, resource, schedule, and technical aspects of the project are identified, assessed, and documented.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 13 Risk Management base practices</i>	<i>SE- CMM Manage Risk: Base Practices</i>	<i>SW-CMM Integrated Software Management: Activities performed</i>	<i>SA-CMM Acquisition Risk Management: Activities Performed</i>	<i>SA -CMM Project Performance Management: Activities Performed</i>	<i>SW- CMM Software Project Planning &amp; Tracking &amp; Oversight Activities Performed</i>
3. Assess Risks	3. Assess risks and determine the probability of occurrence and consequence of realization.	10. The project's software risks are identified, assessed, documented and managed according to a documented procedure.		10. The project team identifies and analyzes risks and identifies specific risk handling actions for those risks.	13. The software risks associated with the cost, resource, schedule, and technical aspects of the project are identified, assessed, and documented.
4. Review and Validate Risk Assessment	4. Obtain formal recognition of the project risk assessment.				
5. Execute Risk Mitigation Plans	5. Implement the risk-mitigation activities. 6. Monitor risk-mitigation activities to ensure that the desired results are being obtained.	10. The project's software risks are identified, assessed, documented and managed according to a documented procedure. 11. Reviews of the software project are periodically performed to determine the actions needed to bring the software project's performance and results in line with the current and projected needs of the business, customer, and end users, as appropriate.	3. The project team performs its software acquisition risk management activities in accordance with its documented plans. 5. Software acquisition risk handling actions are tracked and controlled until risks are mitigated.		10. The software risks associated with cost, resource, schedule, and technical aspects of the project are tracked.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 14: FAA-iCMM v1.0 Sources of Coordination Practices**

<b><i>PA 14 Coordination base practices</i></b>	<b><i>SE-CMM Integrate Disciplines: (*Integrate Systems) Base Practices</i></b>	<b><i>SW-CMM Intergroup Coordination (Requirements Management (RM), SW Project Planning (SPP), Integrated SW Management (ISM)): Activities Performed</i></b>	<b><i>SA-CMM Project Performance Management (Software Acquisition Planning (SAP)): Activities Performed</i></b>
1. Involve Disciplines	1. Involve the disciplines that are essential to system development in a timely manner.	1. The software engineering group and the other engineering groups participate with the customer and end users, as appropriate, to establish the system requirements. RM-Ac1. The software engineering group reviews the allocated requirements before they are incorporated into the software project. SPP.Ac1. The software engineering group participates on the project proposal team. SPP.Ac3. The software engineering group participates with other affected groups in the overall project planning throughout the project's life.	5. The project team coordinates its activities with other organizations and activities supporting the project. SAP-Ac1. Software acquisition planning personnel are involved in system acquisition planning.
2. Promote Cross-Discipline Understanding	4.2. Promote cross-discipline understanding among the developers.		
3. Establish Coordination Methods	4.3. Establish methods for interdisciplinary coordination.  * 5.2. Coordinate interface specifications and changes with all affected groups and individuals.	2. Representatives of the project's software engineering group work with representatives of the other engineering groups to monitor and coordinate technical activities and resolve technical issues. 5. Work products produced as input to other engineering groups are reviewed by representatives of the receiving groups to ensure that the work products meet their needs. 6. Intergroup issues not resolvable by the individual representatives of the project engineering groups are handled according to a documented procedure. 7. Representatives of the project engineering groups conduct periodic technical reviews and interchanges.	8. The project team performs periodic reviews to ensure current and projected needs of the end user will be satisfied.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<b><i>PA 14</i></b> <b><i>Coordination</i></b> <b><i>base practices</i></b>	<b><i>SE-CMM</i></b> <b><i>Integrate Disciplines:</i></b> <b><i>(*Integrate Systems)</i></b> <b><i>Base Practices</i></b>	<b><i>SW-CMM</i></b> <b><i>Intergroup Coordination</i></b> <b><i>(Requirements Management</i></b> <b><i>(RM), SW Project Planning</i></b> <b><i>(SPP), Integrated SW</i></b> <b><i>Management (ISM)):</i></b> <b><i>Activities Performed</i></b>	<b><i>SA-CMM</i></b> <b><i>Project Performance</i></b> <b><i>Management</i></b> <b><i>(Software Acquisition</i></b> <b><i>Planning (SAP)):</i></b> <b><i>Activities Performed</i></b>
4. Establish Resolution Methods	4.4. Establish and use methods for identifying and resolving interdisciplinary issues, and creating integrated solutions.	1. The software engineering group and the other engineering groups participate with the customer and end users, as appropriate, to establish the system requirements. 2. Representatives of the project's software engineering group work with representatives of the other engineering groups to monitor and coordinate technical activities and resolve technical issues. 4. Critical dependencies between engineering groups are identified, negotiated, and tracked according to a documented procedure. 5. Work products produced as input to other engineering groups are reviewed by representatives of the receiving groups to ensure that the work products meet their needs. 6. Intergroup issues not resolvable by the individual representatives of the project engineering groups are handled according to a documented procedure. ISM-Ac9. Critical dependencies and critical paths of the project's software schedule are managed according to a documented procedure.	7. Critical dependencies are identified, negotiated, and managed.
5. Communicate Interdisciplinary Activity Results	4.5. Communicate results of interdisciplinary activities to affected groups.	7. Representatives of the project engineering groups conduct periodic technical reviews and interchanges.	
6. Develop and Communicate Project Goals	4.6. Develop project goals and ensure that all affected groups and individuals are fully aware of them.		
<i>covered by generic practice</i>		3. A documented plan is used to communicate intergroup commitments and to coordinate and track the work performed.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 15: FAA-iCMM v1.0 Sources of Quality Assurance and Management Practices**

<i>PA 15 Quality Assurance and Management Base practices</i>	<i>SE-CMM Ensure Quality: Base practices</i>	<i>SW-CMM Software Quality Assurance (SQA): (* Software Subcontract Management) Activities Performed</i>
1. Monitor Process Compliance	8.1 Ensure the defined system engineering process is adhered to during the system life cycle.	4. The SQA group reviews the software engineering activities to verify compliance. 8. The SQA group conducts periodic reviews of its activities and findings with the customer's SQA personnel, as appropriate. 3. The SQA group participates in the preparation and review of the project's software development plan, standards, and procedures. *SSM-Ac 10. The prime contractor's software quality assurance group monitors the subcontractor's software quality assurance activities according to a documented procedure.
2. Evaluate product and process quality	8.2 Evaluate work product measures against the requirements for work product quality.  8.3 Measure the quality of the systems engineering process used by the project.	5. The SQA group audits designated software work products to verify compliance.
3. Detect need for corrective action	8.7 Establish a mechanism or a set of mechanisms to detect the need for corrective actions to processes or products.	7. Deviations identified in the software activities and software work products are documented and handled according to a documented procedure.
4. Record and report results	8.5 Obtain employee participation in identifying and reporting quality issues.	6. The SQA group periodically reports the results of its activities to the software engineering group.
5. Analyze quality	8.4 Analyze quality measurements to develop recommendations for quality improvement or corrective action, as appropriate.	
6. Initiate quality improvement opportunities.	8.6 Initiate activities that address identified quality issues or quality improvement opportunities.	
<i>Covered by generic practices</i>		1. A SQA plan is prepared for the software project according to a documented procedure.  2. The SQA group's activities are performed in accordance with the SQA plan.

**Table PA 16: FAA-iCMM v1.0 Sources of Configuration Management Practices**

<i><b>PA 16 Configuration Management base practices</b></i>	<i><b>SE-CMM Manage Configurations: Base Practices</b></i>	<i><b>SA-CMM Transition to Support: Activities Performed</b></i>	<i><b>SW-CMM Configuration Management: Activities Performed</b></i>
1. Establish a configuration management strategy	9.1 Decide among candidate methods for configuration management.		1. (ability) A board having authority for managing the project's software baseline (i.e., a software configuration control board -- SCCB) exists or is established. 4. The software work products to be placed under configuration management are identified.
2. Identify and baseline configuration items and interim work products	9.2 Identify configuration units that constitute identified baselines.		4. The software work products to be placed under configuration management are identified.
3. Establish and maintain a repository for work product baselines	9.3 Maintain a repository of work product baselines.		3. A configuration management library system is established as a repository for the software baselines. 7. Products from the software baseline library are created and their release is controlled according to a documented procedure.
4. Control changes	9.4 Control changes to established configuration units.	3. The project team oversees the configuration control of the software products throughout the transition.	5. Change requests and problem reports for all configuration items/units are initiated, recorded, reviewed, approved, and tracked according to a documented procedure. 6. Changes to baselines are controlled according to a documented procedure. 7. Products from the software baseline library are created and their release is controlled according to a documented procedure. 8. Status of configuration data is recorded according to a documented procedure.
5. Record and report configuration status	9.5 Communicate status of configuration data, proposed changes, and access information to affected groups.	3. The project team oversees the configuration control of the software products throughout the transition.	5. Change requests and problem reports for all configuration items/units are initiated, recorded, reviewed, approved, and tracked according to a documented procedure. 8. Status of configuration data is recorded according to a documented procedure. 9. Standard reports documenting

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

			the SCM activities and the contents of the software baseline are developed and made available to affected groups and individuals.
6. Conduct configuration audits and inspections.			10. Software baseline audits are conducted according to a documented procedure.
<i>Covered by generic practices</i>			1. A SCM plan is prepared for each software project according to a documented procedure. 2. A documented and approved SCM plan is used as the basis for performing the SCM activities.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

---

**Table PA 17: FAA-iCMM v1.0 Sources of Peer Review Practices**

<i>PA 17 Peer Review base practices</i>	<i>SW-CMM</i> <b>Peer Review:</b> (*SPE- Software Product Engineering) <i>Activities Performed</i>
1. Conduct peer reviews	2. Peer reviews are performed according to a documented procedure.
2. Record peer review data	3. Data on the conduct and results of the peer reviews are recorded.  * <b>SPE-Ac 9.</b> Data on defects identified in peer reviews and testing are collected and analyzed according to the project's defined software process.
<i>Covered by generic practices</i>	1. Peer reviews are planned, and the plans are documented.

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 18: FAA-iCMM v1.0 Sources of Measurement Practices**

<i><b>PA 18 Measurement base practices</b></i>	<i><b>SA-CMM Quantitative Process Management: Activities Performed</b></i>	<i><b>SA-CMM Quantitative Acquisition Management: Activities Performed</b></i>	<i><b>SW-CMM Quantitative Process Management: Activities Performed</b></i>	<i><b>SW-CMM Software Quality Management: Activities Performed</b></i>
1. Establish Measures Based on Goals		3. The quantitative objectives for each project's software products and services are defined. 4. The quantitative objectives for each project's products and services are incorporated into the solicitation package and resulting contract according to the project's defined software acquisition process.		3. The project's quantitative quality goals for the software products are defined, monitored, and revised throughout the software life cycle. 5. The software project's quantitative quality goals for products are allocated appropriately to subcontractors delivering software products to the project.
2. Collect and Analyze Measurements	3. The measurement data used to quantitatively control the project's defined software acquisition process are collected in accordance with the project's quantitative process management plans.  4. Each project's defined software acquisition process is analyzed and quantitatively controlled according to the project's quantitative process management plans.	5. Each project's acquired software products and services are measured, analyzed and compared to the project's established quantitative objectives.	4. The measurement data are collected according to a documented procedure 5. The project's defined software process is analyzed and brought under quantitative control according to a documented procedure.	4. The quality of the project's software products is measured, analyzed, and compared to the products' quantitative quality goals on an event-driven basis.
3. Communicate quantitative status	5. Reports documenting the results of the project team's quantitative process management activities are prepared and distributed.		6. Reports documenting the results of the software project's quantitative process management activities are prepared and distributed.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>PA 18 Measurement base practices</i>	<i>SA-CMM Quantitative Process Management: Activities Performed</i>	<i>SA-CMM Quantitative Acquisition Management: Activities Performed</i>	<i>SW-CMM Quantitative Process Management: Activities Performed</i>	<i>SW-CMM Software Quality Management: Activities Performed</i>
4. Take corrective action	4. Each project's defined software acquisition process is analyzed and quantitatively controlled according to the project's quantitative process management plans.		5. The project's defined software process is analyzed and brought under quantitative control according to a documented procedure.	
<i>Covered by generic practices</i>	1. The acquisition organization's software acquisition process capability baseline is established and maintained according to a written procedure. 2. Each project team performs its activities in accordance with its documented quantitative process management plans. 6. Causal analysis of each project's defined software acquisition process is conducted on a periodic basis to determine root causes of variances from project plans. 7. Changes are implemented to correct the project's defined software acquisition process where it is out of expected or acceptable bounds.	1. Each project team performs its activities in accordance with its documented quantitative acquisition management plans. 2. The acquisition organization utilizes quantitative measures as a normal part of management review and oversight of acquired products and services. 6. Causal analysis of each project's acquired products and services is conducted on a periodic basis to determine root causes of variances from project plans. 5. Each project's acquired software products and services are measured, analyzed and compared to the project's established quantitative objectives. 7. Changes are implemented to correct project's acquired products and services that are out of expected or acceptable bounds.	1. The software project's plan for quantitative process management is developed according to a documented procedure. 2. The software project's quantitative process management activities are performed in accordance with the project's quantitative process management plan 3. The strategy for the data collection and the quantitative analyses to be performed are determined based on the project's defined process. 4. The measurement data used to control the project's defined software process quantitatively are collected according to a documented procedure 7. The process capability baseline is established and maintained according to a documented procedure	1. The project's software quality plan is developed and maintained according to a documented procedure. 2. The project's software quality plan is the basis for the project's activities for software quality management.
<i>To other PAs</i>	6. Causal analysis of each project's defined	2. The acquisition organization utilizes		-

<i>PA 22 Training Base practices</i>	<i>SE-CMM Provide Ongoing Skills and Knowledge: Base Practices</i>	<i>SA-CMM Training Program: Activities Performed</i>	<i>SW-CMM Training Program: Activities Performed</i>
1. Identify strategic training needs	17.1 Identify training needs.	1. The org's training program is developed and maintained.	2. The organization's training plan is developed and revised according to a documented procedure.
2. Identify unique training needs	17.1 Identify training needs. 17.3 Assure availability of skill and knowledge.	1. The org's training program is developed and maintained. 2. Each software acquisition project identifies specific training needs and develops a training plan in accordance with training program procedures.	1. Each software project develops and maintains a training plan that specifies its training needs. 2. The organization's training plan is developed and revised according to a documented procedure.
3. Train individuals	17.5 Train personnel.	3. Software training for the project team is performed in accordance with the org's training program. 4. A waiver procedure for required training is established and used to determine whether individuals already possess the knowledge and skills required to perform their designated roles.	3. The training for the organization is performed in accordance with the organization's training plan. 5. A waiver procedure for required training is established and used to determine whether individuals already possess the knowledge and skills required to perform their designated roles.
4. Obtain training	17.2 Select mode of knowledge or skill acquisition. 17.4 Prepare training materials.		4. Training courses prepared at the organizational level are developed and maintained according to the organization standards.
5. Establish and maintain records	17.7 Maintain training records. 17.8 Maintain training materials.	5. Training records are maintained.	4. Training courses prepared at the organizational level are developed and maintained according to the organization standards. 6. Records of training are maintained.
6. Assess training effectiveness	17.6 Assess training effectiveness.	6. Measurements are used to determine the quality of the training program.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

**Table PA 23: FAA-iCMM v1.0 Sources of Innovation Practices**

<i>Innovation base practices</i>	<i>SE-CMM Manage Systems Engineering Support Environment: Base Practices</i>	<i>SA-CMM Acquisition Innovation Management: Activities Performed</i>	<i>SW-CMM Technology Change Management: Activities Performed</i>	<i>SE-CMM Manage Product Line Evolution:  Selected Base Practices</i>
1. Maintain New Technology Awareness	16.1 Maintain awareness of the technologies that support the organization's goals.	5. Software acquisition management personnel are kept informed of new technologies.	2. The group responsible for the organization's technology change management activities works with the software projects in identifying areas of technology change. 3. Software managers and technical staff are kept informed of new technologies.	15.2 Identify new product technologies or enabling infrastructure that will help the organization acquire, develop, and apply technology for competitive advantage.
2. Select New Technologies	16.2 Determine requirements for the organization's systems engineering support environment based on organizational needs. 16.7 Monitor the systems engineering support environment for improvement opportunities.	2. The group responsible for conducting acquisition innovation management activities conducts routine and periodic appraisals of new techniques and technologies as candidates for inclusion in the acquisition organization's standard software acquisition process.	4. The group responsible for the organization's technology change management systematically analyzes the organization's standard software process to identify areas that need or could benefit from new technology. 5. Technologies are selected and acquired for the organization and software projects according to a documented procedure.	
3. Prepare for Infusion	16.3 Obtain a systems engineering support environment that meets the requirements established in Determine Support Requirements by using the practices in the Analyze Candidate Solutions process area.		6. Pilot efforts for improving technology are conducted, where appropriate, before a new technology is introduced into normal practice.	

## Section 6: FAA-iCMM Version 1.0 Practice-Level Maps

<i>Innovation base practices</i>	<i>SE-CMM Manage Systems Engineering Support Environment: Base Practices</i>	<i>SA-CMM Acquisition Innovation Management: Activities Performed</i>	<i>SW-CMM Technology Change Management: Activities Performed</i>	<i>SE-CMM Manage Product Line Evolution:  Selected Base Practices</i>
4. Infuse New Technologies	16.5 Insert new technologies into the systems engineering support environment based on the organization's business goals and the projects' needs.		7. Appropriate new technologies are incorporated into the organization's standard software process according to a documented procedure. 8. Appropriate new technologies are incorporated into the projects' defined software processes according to a documented procedure.	15.5 Insert new technology into product development, marketing, and manufacturing.
5. Support Innovation	16.4 Tailor the systems engineering support environment to individual project's needs. 16.6. Maintain the systems engineering support environment to continuously support the projects dependent on it. 16.7 Monitor the systems engineering support environment for improvement opportunities.	4. The acquisition organization works with the projects to foster an environment which facilitates adoption of initiatives beneficial to the acquisition organization.		
<i>covered by generic practices</i>		1. The acquisition organization performs its activities in accordance with documented acquisition innovation management plans. 3. The project team performs its activities in accordance with its documented acquisition innovation management plans.	1. The organization develops and maintains a plan for technology change management.
